**TABLE OF ACRONYMS**

CEQA	California Environmental Quality Act
EIR	Environmental Impact Report
RFJN	Respondent County of Marin’s Request for Judicial Notice
SEIR	Supplemental Environmental Impact Report
SCA	Stream Conservation Area
SPAWN	Salmon Protection and Watershed Network

1 **INTRODUCTION**

2 The Central California Coast coho salmon and steelhead trout are on a fast track to  
3 extinction. (Supplemental Administrative Record (“SAR”) 1193-94.) The number of Coho salmon  
4 that are born and return to spawn in the Lagunitas Creek watershed has plunged from a historical  
5 population of 4,000 to just a few hundred per year. (SAR 1193.) Counts of steelhead redds (nests)  
6 have similarly declined, with only 120 redds observed in the 2015-2016 spawning season. (SAR  
7 1193-94.) Everyone agrees on the cause: residential and commercial urbanization, which has so  
8 degraded the salmonid populations that, absent affirmative human intervention, they will disappear  
9 forever. (SAR 1193-94, 1231; Respondent’s Opposition Brief (“Resp. Br.”) at 4.)

10 Nonetheless, Respondent County of Marin’s (“County”) 2007 General Plan Update  
11 (“Countywide Plan”) allows further development in the Lagunitas Creek watershed and San  
12 Geronimo Valley. The County’s Supplemental Environmental Impact Report (“SEIR”) for the  
13 Countywide Plan recognizes that, left unmitigated, this development will significantly reduce the  
14 winter survival and spawning success of salmon and steelhead in the San Geronimo Valley, further  
15 impairing their recovery. To mitigate these impacts, the SEIR relies principally on Mitigation  
16 Measure 5.1-1, which requires the Marin County Board of Supervisors to adopt at some point in the  
17 future a Stream Conservation Area Ordinance (“Mitigation Ordinance”) regulating development.  
18 The County argues that it has the legal authority to promise such legislation, that the courts and the  
19 public can enforce that promise, that it was unable to adopt the Ordinance in a more timely manner,  
20 and that the Ordinance specifies how the County will assess its performance.

21 We have been down this road before. As part of the first Countywide Plan update in 2007,  
22 the County committed to adopting a mitigation ordinance in one to four years. (Resp. Br. at 8.)  
23 After five years passed, Petitioner Salmon Protection and Watershed Network (“SPAWN”)  
24 challenged the County’s failure to satisfy this commitment. The County defended its inaction by  
25 asserting that SPAWN was attempting to “usurp[]” the County’s “local policy-making authority”;  
26 that it had unreviewable discretion to decide when to pursue and adopt the ordinance, making a  
27 mandatory duty claim unavailable; and that “the County cannot do everything, given competing  
28 demands on County resources.” (See Respondent’s Request for Judicial Notice [“RFJN”], Exh. 2 at

1 principle of law—in CEQA or otherwise—that prevents a public entity from committing to take  
2 action through its elected representatives in the future.” (Resp. Br. at 14.)

3 The County tries to escape this inevitable conclusion by relying on *Sierra Club v. County of*  
4 *San Diego* (2014) 231 Cal. App. 4th 1152. (Resp. Br. at 14-15.) That case is legally irrelevant and  
5 factually distinguishable. In *Sierra Club*, San Diego County certified an EIR for its general plan  
6 update. (231 Cal. App. 4th at 1161-63.) The EIR included a “County Climate Change Action  
7 Plan” as a greenhouse-gas mitigation measure, which the Board of Supervisors formally adopted  
8 nine months later. (*Id.* at 1156-63.) The plaintiff argued, and the court agreed, that the plan failed  
9 to meet the mitigation requirements in the EIR. (*Id.* at 1157, 1176.)

10 No one challenged, and the Court of Appeal did not rule on, whether San Diego County had  
11 the authority to commit its Board of Supervisors to adopt the future plan as mitigation. The  
12 plaintiff did not file suit until after the board had already adopted the plan on schedule. (*Id.* at  
13 1163.) As the Court of Appeal explained, the suit had nothing to do with “the validity of the  
14 general plan update [program EIR] or the enforceability of the mitigation measures provided in that  
15 document.” (*Id.* at 1166.) The case is therefore inapposite and provides no support for the  
16 County’s claim that it has the authority to obligate a future Board of Supervisors to adopt the  
17 Mitigation Ordinance. Furthermore, the future action at issue in *Sierra Club* was the county’s  
18 commitment to approve in less than a year an extended piece of its general plan update. (*Id.* at  
19 1159-60.) That is qualitatively different from Marin County’s commitment to enact in five years  
20 (or longer) new legislation; the latter dictates the Board of Supervisors’ action in a way that the  
21 former does not.

22 *Golden Gate Bridge District v. Muzzi* (1978) 83 Cal. App. 3d 707 is irrelevant for the same  
23 reasons. In that case, a bridge district relied on its eminent domain power to condemn private  
24 property to be used as a dredge disposal site for a new ferry terminal. The opinion does not indicate  
25 whether the district had actually committed itself to the condemnation in an EIR. (*See id.* at 712-  
26 13.) Even if it did, condemnation is not legislation, and the court addressed not whether the district  
27 could be so bound, but rather whether eminent domain could be used as environmental mitigation.  
28 (*Id.* at 712-14.)

1 The County’s remaining cases are even more off base. The mitigation measures at issue in  
2 *Laurel Heights Improvement Association v. Regents of University of California* (1988) 47 Cal. 3d  
3 376 and *Defend the Bay v. City of Arline* (2004) 119 Cal. App. 4th 1261 did not involve future  
4 legislative acts. In *Laurel Heights*, the Regents of the University of California certified an EIR  
5 committing the University of California-San Francisco (a component of the state university system)  
6 but not the Regents (the University of California’s legislative body), to mitigation actions, including  
7 promoting group transportation programs on its campus to mitigate traffic and parking problems.  
8 (47 Cal. 3d at 389, 418.) Similarly, in *Defend the Bay*, the City of Irvine certified an EIR for a  
9 general plan update with adverse impacts on imperiled plants. (119 Cal. App. 4th at 1273.) As  
10 mitigation, the EIR incorporated by reference specific mitigation measures in a statewide habitat  
11 conservation plan, including “evaluation,” “monitoring and management,” and “coordinat[ion]”  
12 with other agencies. (*Id.* at 1275-76.) These measures were commitments to administrative action  
13 by city departments, not a promise by the city that its city council would pass specific legislation  
14 years later.

15 Finally, the County observes that its Board of Supervisors has the authority to pass land-use  
16 ordinances. (Resp. Br. at 15.) This fact is both correct and irrelevant, just as it was irrelevant that  
17 state law permitted the climate-change plan in *Sierra Club* or the condemnation in *Golden Gate*.  
18 The question here is whether the County has the authority to bind a future Board of Supervisors to  
19 taking legislative action five or more years in the future. It does not, and the County offers no  
20 authority showing otherwise.

21 **II. Mitigation Measure 5.1-1 Violates CEQA Because It Is Not Enforceable.**

22 CEQA requires that mitigation measures be “fully enforceable through permit conditions,  
23 agreements, or other measures.” (Pub. Res. Code § 21081.6(b); *see also* CEQA Guidelines  
24 § 15126.4(a)(2); *Fed’n of Hillside and Canyon Ass’ns v. City of Los Angeles* (2000) 83 Cal. App.  
25 4th 1252, 1261.)

26 Mitigation Measure 5.1-1 is unenforceable. First, a mitigation measure cannot be enforced  
27 if it must be adopted and implemented by a party over whom an agency has no control. (*See*  
28 Petitioners’ Opening Brief (“Pet. Br.”) at 17; *King & Gardiner Farms, LLC v. Cty. of Kern* (2020)

1 45 Cal. App. 5th 814, 859-60.) As described above, the County Board of Supervisors cannot  
2 control or direct the legislative discretion of a future Board. Second, a mitigation measure is also  
3 unenforceable if the public, through the courts, cannot obtain relief against an agency for failing to  
4 undertake the measure. (*See* Pet. Br. at 18 [citing cases].) Because the Mitigation Ordinance is a  
5 future legislative act, the courts have no power to force the County adopt it. (*See id.*; *Salmon Prot.*  
6 *& Watershed Network v. Cty. of Marin* (2014) 2014 WL 845416, at \*10 (“SPAWN”) “[I]t remains  
7 within the discretion of the county to determine when to enact the required ordinance.”.) Thus,  
8 even if the County could obligate a future Board of Supervisors to enact the Ordinance, neither the  
9 public nor the courts could enforce that obligation and Measure 5.1-1 would be still be unlawful  
10 under CEQA. In fact, the County employed this limit on enforcement to avoid fulfilling its promise  
11 to pass a previous mitigation ordinance. (*See* RFJN, Exh. 2 at 36 [Adopting an ordinance “is  
12 certainly not the kind of ministerial or mandatory duty that has traditionally been actionable under  
13 Code of Civil Procedure section 1085.”].)

14         The County makes three meritless counter-arguments. First, the County posits that because  
15 it adopted Measure 5.1-1 as part of the Countywide Plan, the measure is inherently enforceable.  
16 (Resp. Br. at 16.) But simply incorporating an unenforceable mandate into a general plan does not  
17 make it enforceable. *Cf. Avco Cmty. Developers, Inc. v. S. Coast Reg’l Comm’n* (1976) 17 Cal. 3d  
18 785, 799-800 [contractual commitment to decline to exercise zoning authority was “invalid and  
19 unenforceable” as a matter of law].) Straining to show otherwise, the County misrepresents the  
20 facts and holding of *Sierra Club*, claiming that the plaintiff “was trying to *enforce* the county’s  
21 promise to implement” the climate-change plan the county had committed to in its general plan  
22 update. (Resp. Br. at 17.) Not so. In that case, the plaintiff filed suit *after* the County had already  
23 adopted the climate-change plan. (*Sierra Club*, 231 Cal. App. 4th at 1163.) Accordingly, the  
24 plaintiff alleged only that “that the [plan] did not meet the requirements of Mitigation Measure  
25 CC-1.2” in the general plan update, not that the county had failed to adopt the plan in the first place.  
26 (*Id.*) For these reasons, the court made clear that the plaintiff was “not challenging the validity of  
27 the general plan update [program EIR] or the enforceability of the mitigation measures provided in  
28 that document.” (*Id.* at 1166.)

1 Second, the County argues that it may relinquish its responsibility for carrying out  
2 mitigation, pointing to cases in which lead agencies delegated responsibility for undertaking  
3 mitigation activities to other agencies under Public Resources Code section 21081(a)(2). (*See*  
4 *Resp. Br.* at 18, citing *Mission Bay All. v. Office of Cmty. Inv. & Infrastructure* (2016) 6 Cal. App.  
5 5th 160, 188-91 [upholding transportation mitigation measures that required future actions by third-  
6 party transit agencies] and *City of Marina v. Bd. of Trustees of Cal. State Univ.* (2006) 39 Cal. 4th  
7 341, 363-64 [upholding contribution of funds to mitigation that would be undertaken by a third-  
8 party reuse authority].) In this case, however, the County is relying on its own legislative body to  
9 adopt Mitigation Measure 5.1-1. More importantly, the mitigation measures that the agencies in  
10 *Mission Bay Alliance* and *City of Marina* delegated were not legislative acts to be adopted by the  
11 other agencies' legislative bodies. The County's attempted analogy would hold only if a lead  
12 agency could commit another agency's deliberative body to adopting specific legislation in the  
13 future. It cannot.<sup>1</sup>

14 Third and finally, the County tries to argue that Measure 5.1-1 is enforceable based on  
15 statements the parties made in their briefs in prior proceedings eight years ago. (*See Resp. Br.* at  
16 19, citing RFJN.) In those statements, SPAWN expressed its belief that the County's previous  
17 commitment to adopt a different mitigation ordinance was binding. The County agreed. However,  
18 SPAWN made those statements before the Court of Appeal concluded that "it remains within the  
19 discretion of the county to determine when to enact the required ordinance" (*SPAWN*, 2014 WL  
20 845416, at \*10); before the County once again approved the Countywide Plan without having in  
21 place the mitigation that the County's own SEIR says is required to reduce significant impacts to  
22

---

23 <sup>1</sup> *Mission Bay Alliance* and *City of Marina* are distinguishable for other reasons. In both cases there  
24 were ample indicia that the mitigation would be undertaken. (*Mission Bay All.*, 6 Cal. App. 5th at  
25 189-90; *City of Marina*, 39 Cal. 4th at 365.) And in *City of Marina*, the agency conceded that  
26 "ultimate implementation of the improvement program is under the responsibility of [the reuse  
27 authority], and cannot be controlled or assured by" it, and so cautioned that "the significant  
28 impacts . . . will remain significant and unavoidable." (*City of Marina*, 39 Cal. 4th at 364.) The  
County points to no such indicia of enforceability for Mitigation Measure 5.1-1, and it did not adopt  
a contingency plan in the event the Mitigation Ordinance is never adopted or fails to meet the  
requirements set forth in the SEIR. Quite the opposite—the County acknowledges that the  
Mitigation Ordinance could be larded with "exemptions." (SAR 1798.)

1 salmon; before the County admitted that the Mitigation Ordinance, once passed, might contain  
2 more exemptions than the version in the SEIR (SAR 1798); and before the County included a  
3 poison pill stating that the County would adopt the Ordinance within five years, but only “barring  
4 unforeseen delays caused by continuing, new, or threatened litigation related to the SEIR process  
5 and/or the Ordinance” (SAR 1248). Since making those statements eight years ago, SPAWN has  
6 learned the hard way that the County’s commitments are not enforceable.

7 Mitigation Measure 5.1-1 fails CEQA’s enforceability mandate. Even if the County had the  
8 authority to bind a future Board to specific legislative action, no court could enforce such a  
9 commitment.

10 **III. Mitigation Measure 5.1-1 Violates CEQA Because It Is Unlawfully Deferred.**

11 Lead agencies “shall not” defer the formulation of mitigation measures included in an EIR.  
12 (Pub. Res. Code § 15126.4(a)(1)(B).) The only exception is “when it is impractical or infeasible to  
13 include those details during the project’s environmental review.” (Pub. Res. Code  
14 § 15126.4(a)(1)(B); *see also POET, LLC v. State Air Res. Bd.* (2013) 218 Cal. App. 4th 681, 736.)  
15 The CEQA Guidelines recognize that the “only feasible mitigation for cumulative impacts may  
16 involve the adoption of ordinances or regulations” (CEQA Guidelines § 15130(c)) but do not  
17 exempt such ordinances or regulations from CEQA’s standards for deferred mitigation.

18 Here the County violated CEQA by deferring adoption and implementation of the  
19 Mitigation Ordinance without providing the justification that CEQA requires. As Petitioners  
20 explained in their comments on the SEIR, the County could easily have developed the Mitigation  
21 Ordinance during the supplemental review process. (SAR 21974.) Had it done so, the Board of  
22 Supervisors could have adopted the Mitigation Ordinance at the same time it certified the SEIR and  
23 re-approved the Countywide Plan. (*Id.*) Despite Petitioners’ requests, the County never explained  
24 why adopting the Mitigation Ordinance concurrently with certification of the SEIR—in the way  
25 that CEQA anticipates—was “infeasible.”

26 Instead, the County offers two rationalizations for waiting to adopt the Mitigation  
27 Ordinance: (1) The SEIR is part of a general plan, with future, project-specific study and mitigation  
28

1 to follow, and (2) legislation takes time and effort. Neither justification withstands scrutiny.<sup>2</sup>

2 **A. The County Could Have Adopted, and Therefore Was Required to Adopt, the**  
3 **Mitigation Ordinance at the Time It Certified the SEIR and Re-approved the**  
4 **Countywide Plan.**

5 The County first opines that the “nature of general plans” is such that details are to be  
6 “worked out during implementation.” (Resp. Br. at 21.) According to the County, the SEIR is  
7 merely a “first tier of environmental review” that provides a “foundation upon which future,  
8 project-specific CEQA documents can build.” (*Id.*) Once the SEIR and the Countywide Plan are in  
9 place, the “County and other stakeholders can rely on them to address more specialized and  
10 localized activities, such as the process of developing and adopting the specific details of the SCA  
11 ordinance called for by MM 5.1-1 as they relate to the specific circumstances present in different  
12 areas of the County.” (*Id.*)

13 This argument is a red herring. The County proposed the Mitigation Ordinance to mitigate  
14 the admittedly significant cumulative impacts of the 2007 Countywide Plan, not of particular site-  
15 specific projects. (SAR 1271-73.) The SEIR acknowledges that re-approving the Countywide Plan  
16 would yield significant adverse impacts on coho salmon and steelhead, and that adopting the  
17 Mitigation Ordinance would reduce those impacts to a less-than-significant level. (*Id.*) The SEIR’s  
18 description of the Mitigation Ordinance runs nearly seven pages. (SAR 1248-54.) The County  
19 issued the SEIR at the tail end of two decades and many thousands of pages of study. The County  
20 offers no reason why it did not have enough information to adopt the Mitigation Ordinance at the  
21 same time it certified the SEIR.

22 The County’s attempted reliance on the distinction between program and project EIRs is  
23 nothing more than a pretext. (*See Friends of Mammoth v. Town of Mammoth Lakes Redevelopment*  
24 *Agency* (2000) 82 Cal. App. 4th 511, 533, *as modified on denial of reh’g* (Aug. 21, 2000)  
25 [“Designating an EIR as a program EIR . . . does not by itself decrease the level of analysis

---

26 <sup>2</sup> In the County's view, CEQA's substantial evidence standard of review governs whether the County  
27 unlawfully deferred Mitigation Measure 5.1-1. (Resp. Br. at 22, 24.) The County is mistaken. (*See*  
28 *Golden Door Props., LLC v. Cty. of San Diego* (2020) 50 Cal. App. 5th 467, 519 [“Where an EIR  
improperly defers mitigation, the approving agency abuses its discretion by failing to proceed as  
required by law.”].)

1 otherwise required in the EIR.”]; CEQA Guidelines § 15168(c)(5) [“A program EIR will be most  
2 helpful in dealing with later activities if it . . . deals with the effects of the program as specifically  
3 and comprehensively as possible.”].) In each of the cases the County cites, the lead agency  
4 properly deferred mitigation because the agency needed to conduct further study that it had not and  
5 could not undertake earlier. (*See Sacramento Old City Ass’n v. City Council* (1991) 229 Cal. App.  
6 3d 1011, 1028-29 [deferred parking-impacts mitigation was justified based on the specific need for  
7 a further transportation study]; *Defend the Bay*, 119 Cal. App. 4th at 1274-75 [upholding deferral of  
8 mitigation that required further study of whether an endangered species was present in the habitat  
9 area].) Even assuming the Mitigation Ordinance would benefit from further study or detail, the  
10 County does not explain what further studies, information, or details are necessary, or why it was  
11 impractical to conduct those studies or gather that information prior to certifying the SEIR. (*See*  
12 *Golden Door*, 50 Cal. App. 5th at 527 [“[T]he fact more precise information may be available  
13 during the next tier of environmental review does not excuse [the agency] from providing what  
14 information it reasonably can now.” (quotation marks omitted)]; *Sacramento Old City Ass’n*, 229  
15 Cal. App. 3d at 1028-29 [deferral of mitigation “known to be feasible” is permitted only where  
16 “practical considerations *prohibit* devising such measures” earlier (emphasis added)].)

17         The County is recycling a well-worn, and already-rejected, argument. In the initial round of  
18 this litigation, the County leaned on this same program-versus-project EIR rationale to avoid  
19 analyzing the Countywide Plan’s cumulative impacts on salmon. (*See SPAWN*, 2014 WL 845416,  
20 at \*6.) The Court of Appeal saw through this excuse, explaining that a ““program EIR is designed  
21 for analyzing program-wide effects, broad policy alternatives and mitigation measures, cumulative  
22 impacts and basic policy considerations,”” and that “the implication of the county’s position is that  
23 no analysis of the cumulative impacts of development in the watershed will ever be made.” (*Id.* at  
24 \*6-7, quoting *Friends of Mammoth*, 82 Cal. App. 4th at 533–534.) As it was with impacts, so it is  
25 with mitigation: The County cannot wait for “more specialized and localized activities” (Resp. Br.  
26 at 21) to develop the *countywide* Mitigation Ordinance. The County could have, and therefore was  
27 required to, formulate and adopt the Mitigation Ordinance when it certified the SEIR and re-  
28 approved the Countywide Plan. Its failure to do so violates CEQA.

1           **B.       Administrative Burdens Did Not Make Adopting the Mitigation Ordinance**  
2           **Infeasible or Impractical.**

3           Finally, on page 22 of its brief, the County reveals its real reason for deferring the  
4 Mitigation Ordinance until 2024 or later: The “sheer amount of resources that adopting the SCA  
5 ordinance requires” made earlier adoption “impractical.” (Resp. Br. at 22.) The County points to  
6 its previous effort to adopt a mitigation ordinance, which included outreach to stakeholders, public  
7 hearings, and open houses. (*Id.*)

8           Petitioners are confident that the County can conduct environmental review and legislate at  
9 the same time. And this Court’s writ of mandate, and CEQA, require it: The County shall “prepare  
10 and certify a Supplemental EIR with respect to salmonid impacts in San Geronimo watershed only  
11 that analyzes cumulative impacts . . . and that describes mitigation measures in conformity with  
12 CEQA Guidelines section 15130, subdivision (b) and the opinion of the Court of Appeal.”  
13 (Peremptory Writ of Mandate, *Salmon Protection and Watershed Network v. Cty. of Marin* (Super.  
14 Ct. Marin County Apr. 2, 2015, No. CIV 1004866).) The County itself acknowledges that  
15 mitigation of the Countywide Plan’s impacts must be timely, for salmon and steelhead in the San  
16 Geronimo watershed are “likely to become extinct in the foreseeable future.” (SAR 1193-94.)  
17 What the County refers to as “Petitioners’ specific agenda” (Resp. Br. at 22) is none other than the  
18 County’s legal duty.

19           Moreover, the record belies the County’s excuse. Just a month before the Board of  
20 Supervisors certified the SEIR in August 2019, a Marin County Planning Commissioner warned  
21 that “[t]he absence of a Stream Conservation Area ordinance, which is the main mitigation tool and  
22 thus the crux of the matter, concerned [her].” (SAR 21922-23.) Acknowledging this concern,  
23 Assistant Director of Community Development Tom Lai told the Board at its August 2019 meeting  
24 that the Ordinance could be completed in a “considerably shorter time frame” than five years from a  
25 “staff, . . . workload development schedule.” (SAR 22369.) Though Mr. Lai attributed the need for  
26 a five-year timeline to public outreach, he said the County had “learned a lot” from its experience  
27 with the abandoned 2013 ordinance, “including how to engage our communities without having a  
28 long drawn out multiyear process.” (SAR 22369, 22371.) Thus, even the County’s own planning

1 department recognized that the Mitigation Ordinance could be developed contemporaneously with,  
2 or at least soon after, the SEIR and Countywide Plan.

3 In struggling to justify deferring the Mitigation Ordinance, the County puts the cart before  
4 the horse. When an agency develops mitigation measures “at the very end of the EIR process,” the  
5 solution is “not to defer the specification and adoption of mitigation measures until . . . after Project  
6 approval, but, rather, to defer approval of the Project until proposed mitigation measures [are] fully  
7 developed, clearly defined, and made available to the public and interested agencies for review and  
8 comment.” (*Cmtys. for a Better Env’t v. City of Richmond* (2010) 184 Cal. App. 4th 70, 95.) Here,  
9 the County certified the SEIR even though, in the County’s own words, “adoption of the 2007 CWP  
10 depends” on “enact[ing] the SCA ordinance.” (Resp. Br. at 18.) CEQA requires exactly the  
11 reverse: formulating and adopting mitigation before project approval, except in narrow  
12 circumstances where doing so is “infeasible.” The County cannot evade this requirement by  
13 certifying the SEIR, re-approving the Countywide Plan, and relying on an inchoate plan to pass the  
14 Ordinance, some ordinance, at some point in the future. In the meantime, development in the San  
15 Geronimo Valley continues, often illegally, under decades-old rules that do little to protect salmon.

16 **C. Measure 5.1-1 Lacks Legally Required Performance Standards.**

17 Even where it may be justified, deferral of mitigation is legally permissible only when a lead  
18 agency “adopts specific performance standards the mitigation will achieve, and . . . identifies the  
19 type(s) of potential action(s) that can feasibly achieve the performance standard.” (CEQA  
20 Guidelines § 15126.4(a)(1)(B).) That is, deferred mitigation measures must ensure that there is  
21 “some way to reduce impacts to less than significant levels.” (*Ctr. for Biological Diversity v. Dep’t*  
22 *of Fish & Wildlife* (2015) 234 Cal. App. 4th 214, 241.)

23 Mitigation Measure 5.1-1 does not contain performance standards, which measure *whether*  
24 mitigation is being achieved, not *how* mitigation may be achieved. (*See POET*, 218 Cal. App. 4th  
25 at 738 [Performance standards are “for evaluating *the efficacy of the measures implemented.*”  
26 (emphasis added)].) Each of the standards to which the County points in its brief—the ratios for  
27 replacing riparian trees, the timeframe for monitoring those trees, the size of drainage structures,  
28 etc. (Resp. Br. at 23)—falls into the latter category. They are design specifications for how to

1 mitigate the adverse effects of development on salmonids; they do not and cannot measure whether  
2 those effects are actually being reduced. The County points to no performance standard that will  
3 measure the efficacy of Measure 5.1-1 because the measure contains none.

4 Measure 5.1-1 is much like the unlawful mitigation in *POET*. In that case, an agency  
5 deferred the mitigation measures it would consider for the project’s potential increases in nitrogen  
6 oxide emissions. (*POET*, 218 Cal. App. 4th at 733-34.) The agency committed to a net-zero  
7 standard, but the court held that the deferral was improper because it “established no objective  
8 performance criteria for measuring whether the stated goal will be achieved.” (*Id.* at 740.)  
9 Specifically, “it is unclear what tests will be performed and what measurements will be taken to  
10 determine that biodiesel use is not increasing NOx emissions.” (*Id.*) Here, Mitigation Measure  
11 5.1-1 sheds no light on how the County will determine to what extent, if any, the Mitigation  
12 Ordinance contributes to the recovery of salmon and steelhead in the San Geronimo Valley.

13 The County’s legal authorities only highlight this shortcoming. The EIR in *California*  
14 *Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal. App. 4th 603, 612 (“*CNPS*”)  
15 required replacement of vernal pool habitat at a specific ratio to the habitat lost. That measure  
16 allowed the agency to ascertain whether the impact identified in the EIR—loss of vernal pool  
17 habitat—was being adequately mitigated. (*Id.* at 621-22.) Measure 5.1-1 might be comparable if it  
18 required measurable improvements in salmonid habitat quality, survival rates of juvenile fish, or  
19 recovery of salmonid populations to a particular level, but it does not. (*See Golden Door*, 50 Cal.  
20 App. 5th at 524 [“[*CNPS*] is inapposite because [the mitigation measure here] lacks objective  
21 criteria to ensure mitigation is effective.”].)

22 Meanwhile, the dispute in *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.  
23 App. 4th 884, 894-95, 898-99, centered primarily on what “less than significant” meant and  
24 whether measures to mitigate the impacts of an earthquake were feasible—an inquiry the *CNPS*  
25 court explained is separate from whether a mitigation measure contains performance standards  
26 sufficient for deferral under CEQA Guidelines section 15126.4(a)(1)(B). (*CNPS*, 172 Cal. App. 4th  
27 at 621-23.) Moreover, the mitigation at issue in *Oakland Heritage Alliance* established “specific  
28 performance criteria imposed by various ordinances, codes, and standards” for ensuring earthquake

1 resilience, and set forth detailed procedures for achieving that goal. (195 Cal. App. 4th at 910  
2 (quotation marks omitted); *see also Golden Door*, 50 Cal. App. 5th at 519 [discussing why the  
3 mitigation in *Oakland Heritage Alliance* contained lawful performance standards].) Measure 5.1-1  
4 has no such “performance criteria” for ensuring reduced impacts to salmon.

5 Thus, Petitioners’ arguments do not, as the County claims, turn on the “specificity” of the  
6 Mitigation Ordinance’s design or on whether there is “substantial evidence” the Ordinance will or  
7 will not “be effective.” (Resp. Br. at 23-24.) Rather, the issue is whether the County and the public  
8 will have any way of knowing whether the Mitigation Ordinance, once it is in place, is actually  
9 working. Because Measure 5.1-1 has no standards for measuring the Ordinance’s performance in  
10 reducing impacts to salmonid populations in the San Geronimo watershed, it violates CEQA.

11 A final point bears repeating here: The actual mitigation expected to be achieved by  
12 Measure 5.1-1 is far less certain than the mitigation expected in *Oakland Heritage Alliance* or any  
13 similar case. The open-ended legislative process for Measure 5.1-1 permits the County to consider  
14 and account for “social and economic” concerns. (SAR 1283, 1318.) Homeowners and other  
15 stakeholders in the San Geronimo Valley have already voiced strong opposition to the Mitigation  
16 Ordinance and demanded alterations to its draft requirements and exemptions. (SAR 21252-75.)  
17 The SEIR itself suggests that the County Board of Supervisors may respond to homeowners’  
18 economic concerns by easing the Ordinance’s burdens. (SAR 1798.) The uncertainty of how and  
19 when the Mitigation Ordinance will regulate activities in the Lagunitas Creek watershed makes  
20 establishing objective performance standards upfront all the more important. Without them, “the  
21 timing and specific details for implementing” the mitigation required by the SEIR “are subject  
22 to . . . discretion,” such that the mitigation is “not guaranteed to occur at any particular time or in  
23 any particular manner.” (*Pres. Wild Santee v. City of Santee* (2012) 210 Cal. App. 4th 260, 281.)  
24 The County’s deferral of required mitigation is unlawful under CEQA.

**CONCLUSION**

For the foregoing reasons, Petitioners respectfully request that the Court issue a writ of mandate in Case No. CIV 1903709 directing the County to (1) set aside its 2019 re-approval of the Countywide Plan and certification of the SEIR, and (2) adopt valid, enforceable mitigation measures that comply with CEQA prior to approving the project. Petitioners also respectfully request that the Court deny the County’s Return to Peremptory Writ of Mandate in Case No. CIV 1004866.

Dated: January 28, 2021

1 **PROOF OF SERVICE**

2 At the time of service, I was over the age of 18 years of age and not a party to this action. I  
3 am employed in the County of Santa Clara, State of California. My business address is Crown  
4 Quadrangle, 559 Nathan Abbott Way, Stanford, CA 94305.

5 On January 28, 2021, I served the foregoing **PETITIONERS’ REPLY BRIEF** on the  
6 parties in this action as follows:

7  
8 Brian E. Washington, County Counsel  
9 Brian C. Case, Deputy County Counsel  
10 Brandon W. Halter, Deputy County Counsel  
11 OFFICE OF THE COUNTY COUNSEL  
12 CITY OF MARIN  
13 3501 Civic Center Drive, Room 275  
14 San Rafael, CA 94903  
15 bWASHINGTON@marincounty.org  
16 bCASE@marincounty.org  
17 bHALTER@marincounty.org

18 **BY E-MAIL OR ELECTRONIC TRANSMISSION:** I caused a copy of the document(s)  
19 to be sent from e-mail address anamv@stanford.edu to the person(s) at the e-mail address(es)  
20 above. I did not receive, within a reasonable time after transmission, any electronic message or  
21 other indication that the transmission was unsuccessful.

22 I declare under penalty of perjury under the laws of the State of California that the foregoing  
23 is true and correct.

24 Executed on January 28, 2021, at Stanford, California.
