Publicly Traded Public Benefit Corporations: An Empirical Investigation

JENS DAMMANN*

Abstract. Many corporations seek to persuade their investors, customers, and employees that they care not only about profits but also about corporate constituencies such as workers, communities, and the environment. So-called public benefit corporations ("PBCs") are at the forefront of this movement. The law requires the directors of PBCs to balance the goal of profit maximization with the public benefit specified in the corporation's charter and the interests of other stakeholders. In theory, therefore, PBCs are legally committed to their declared public benefit.

In practice, however, the statutory defaults governing PBCs have significant limitations that undermine their effectiveness as commitment mechanisms. Overcoming these limitations requires PBCs to modify the statutory defaults in their charters. But do PBC charters actually contain provisions that modify the default rules to strengthen PBCs' legal commitment to their stated public benefits? To answer this question, I use a novel hand-collected and hand-coded dataset of more than 300 corporate charters. The dataset includes all non-SPAC PBCs that are or used to be publicly traded—nineteen in total—and matches each PBC with twenty general business corporations of similar size that are incorporated in the same state and have been publicly traded for the same number of years. I then compare the PBC charters with the corresponding general business corporation charters. I also examine PBCs' use of potential signaling mechanisms outside corporate law, such as the composition of corporate boards and certification by the non-profit organization B Lab.

The picture that emerges from this analysis is complex and shows substantial heterogeneity across different PBCs. While some PBC charters contain multiple provisions seeking to reinforce the companies' commitments to social or environmental causes, others forgo such provisions entirely, and most fall somewhere between these two extremes. Similarly, the use of non-legal signaling mechanisms varies across corporations. Furthermore, I find that PBCs

For comments and suggestions, I am grateful to Dhruv Aggarwal, Michal Barzuza, Albert Choi, Johan van den Cruijce, Dhammika Dharmapala, Ofer Eldar, Jill Fisch, Jens Frankenreiter, Michael Guttentag, Kevin Haeberle, Assaf Hamdani, Scott Hirst, Kobi Kastiel, Vikramaditya Khanna, Aneil Kovvali, Ann Lipton, Oliver Mackenrodt, Yaron Nili, Elizabeth Pollman, Adam Pritchard, Gabriel Rauterberg, Michael Simkovic, Eric Talley, Naveen Thomas, David Zahring, and conference participants at the 2023 Corporate Law at a Crossroads Conference at the University of Wisconsin Law School, the 2024 Annual Meeting of the American Law and Economics Association (ALEA), the 2024 National Business Law Scholars Conference (NBLSC), and the 2024 Annual Meeting of the German Law and Economics Association (GLEA). I am also grateful to the Leibniz Institute for Financial Research (SAFE) in Frankfurt, Germany. A substantial part of the research for this article was undertaken while I visited the Leibniz Institute in the summer of 2023. For help with pre-submission editing, I owe thanks to Marie Baldwin, Alex Friedman, and Timothy Shyu. Last but not least, the editors of the Stanford Journal of Law, Business and Finance have made numerous suggestions that were useful in revising the Article.

advised by law firms with more relevant experience were more likely to utilize charter provisions strengthening their commitment.

My findings have important legal policy implications. Numerous scholars have proposed reforms that would tighten the statutory restrictions on publicly traded PBCs. However, such calls are premature. Publicly traded public benefit corporations are a very recent phenomenon, and the existing heterogeneity in charter design offers a valuable opportunity to observe the effectiveness of different commitment mechanisms over time before taking regulatory action. Moreover, the positive correlation between lawyers' experience and the level of legal commitment suggests that PBCs may move towards a greater level of legal commitment even without regulatory intervention. For the time being, therefore, regulators would be wise to exercise restraint.

Introduction

Many CEOs emphasize that they care about more than just shareholder wealth maximization. They stress their commitment to other constituencies, such as workers, communities, and the environment.

CEOs claiming to have the interests of non-shareholder constituencies at heart are hardly a new phenomenon. In the early nineteenth century, Henry Ford famously declared that his ambition was "to employ still more men; to spread the benefits of this industrial system to the greatest possible number, to help them build up their lives and their homes."[1] In recent years, though, CEOs' public endorsements of stakeholder values have reached new heights. A paradigmatic example is the Business Roundtable's Statement on the Purpose of a Corporation ("Roundtable Statement" or "Statement"), which proclaims that a corporation's purpose is to serve not only shareholders but also other constituencies such as workers, communities, and the environment.[2] Originally signed by 181 CEOs of large companies,[3] the Business Roundtable Statement has garnered 265 signatures by the end of 2022.[4]

CEOs have good reasons for their public embrace of corporate social responsibility. Many retail customers prefer green or ethically-produced products.[5] Job applicants often care deeply about whether their employer has an

[7] In the last few years, ESG investing has increased dramatically. *See, e.g.*, Quinn Curtis, Jill Fisch & Adriana Z. Robertson, *Do ESG Mutual Funds Deliver on Their Promises?*, 120 MICH. L. REV. 393, 395 (2021) (noting the dramatic growth in ESG investing); Jonathan R. Macey, *ESG Investing: Why Here? Why Now?,* 19 BERKELEY BUS. L.J. 258, 261 (2022) (noting that over the last few years, ESG investing and governance has "move[d] from the wings to center stage"). Some observers have noted ESG investing's growing prominence. *See* Georg Kell, *The Remarkable Rise of ESG*, FORBES (July 11, 2018), https://www.forbes.com/sites/georgkell/2018/07/11/the-remarkable-rise-of-esg [https://perma.cc/94KV-ZAUT] (estimating that ESG investing accounted for $20 trillion in assets under management as of 2018)*; Jason Stevens, The Rise of ESG and the Importance of ESG Data*, NASDAQ (Nov. 19, 2021), https://www.nasdaq.com/articles/the-rise-of-esg-and-the-importance-of-esg-data [https://perma.cc/ZQU3-YM8U] ("ESG funds . . . [raked] in more than $21 billion in the first quarter [of 2021] alone."). One recent study estimates that ESG investing will grow from $4.5 trillion in 2021 to $10.5 trillion in 2026. PRICEWATERHOUSECOOPERS, *Asset and Wealth Management Revolution 2022: Exponential Expectations for ESG* 3 (2022), https://www.pwc.com/gx/en/financial-services/assets/pdf/pwc-awm-revolution-2022.pdf [https://perma.cc/2TDY-2R34]. Moreover, surveys suggest that about a quarter of investment professionals prefer companies that are committed to ESG values. *E.g.*, MCKINSEY & CO., *The ESG Premium: New Perspectives on Value and Performance* (2020), https://www.mckinsey.com/capabilities/sustainability/our-insights/the-esg-premium-new-perspectives-on-value-and-performance/ [https://perma.cc/S9HK-JKV4] (surveying investment professionals and "C-suite leaders" and finding that "[o]ne-quarter of respondents say they would be willing to pay a premium of 20 to 50 percent [for a company with an overall positive as opposed to an overall negative record on ESG issues], and 7 percent say they would pay a premium of more than 50 percent"). In interpreting these numbers, one should keep in mind that the term "ESG investing" can be used very broadly, covering both investment approaches that use ESG data in an attempt to maximize shareholder wealth and investments strategies that accept lower returns in exchange for promoting socially worthy goals. Interestingly, even ESG mutual funds, defined as mutual funds with an explicit policy of adhering to ESG principles, differ with respect to this issue: some explicitly warn investors that they may accept lower profits for the sake of adhering to ESG principles, others make no such disclosures. Curtis et al., *supra* note 7, at 445–46.

[8] *E.g.*, Max M. Schanzenbach & Robert H. Sitkoff, *Reconciling Fiduciary Duty and Social Conscience: The Law and Economics of ESG Investing by a Trustee*, 72 STAN. L. REV. 381, 384 (2020).

corporate constituents, such as their workers, the communities in which they operate, and the environment.[9]

While companies declaring their commitment to non-shareholder constituencies are part of a broad trend, one group of corporations can be said to form the avant-garde of this movement: public benefit corporations, also known as "PBCs." While PBCs are formed under states' business corporation laws, a few key features distinguish them from regular business corporations. A PBC's charter must name a specific public benefit, such as protecting the environment or reducing poverty.[10] Moreover, when making business decisions, a PBC's directors must balance the goal of maximizing shareholder wealth with both the specified public benefit and with the interests of those affected by the PBC's operations.[11] In other words, the law explicitly dispenses with the principle of shareholder primacy and instead binds the PBC's directors to a more complex set of goals.

At least in theory, therefore, public benefit corporations have a clear legal commitment to non-shareholder constituencies. While regular business corporations may publicly declare that they are interested in protecting other stakeholders, there is no requirement or guarantee that they will live up to their promises.[12] Accordingly, declarations from regular business corporations may

---

[9] *See, e.g.*, Susan S. Kuo & Benjamin Means, *Climate Change Compliance*, 107 IOWA L. REV. 2135, 2153 (2022) (pointing out that ESG requires corporations to make decisions that take into account the interests of stakeholders other than shareholders, "such as consumers, workers, communities, and the environment").

[10] *E.g.*, COLO. REV. STAT. ANN. § 7-101-503(1)(a) (West 2022); DEL. CODE ANN. tit. 8, § 362(a)(1) (West 2022); KAN. STAT. ANN. § 17-72a02(a)(1) (West 2022).

[11] *E.g.*, COLO. REV. STAT. ANN. § 7-101-503(1) (West 2022); DEL. CODE ANN. tit. 8, § 362(a) (West 2022); KAN. STAT. ANN. § 17-72a02(a) (West 2022).

[12] This statement emphasizes that regular business corporations *may* take into account stakeholder interests, whereas PBCs are under a legal obligation to do so. In Delaware, one could also highlight an additional difference. According to the prevailing view, Delaware corporate law adheres to the idea of shareholder primacy, meaning that, as a general rule, the directors and officers of a regular business corporation can only protect other constituencies to the extent that their actions are consistent with the goal of long-term shareholder wealth maximization. *See, e.g., eBay Domestic Holdings., Inc. v. Newmark,* 16 A.3d 1, 34 (Del. Ch. 2010) (holding that directors have an obligation "to promote the value of the corporation for the benefit of its stockholders"); *N. Am. Cath. Educ. Programming Found., Inc. v. Gheewalla,* 930 A.2d 92, 101 (Del. 2007) (holding that the directors "have 'the legal responsibility to manage the business of a corporation for the benefit of its shareholders owners'"); Unocal Corp. v. Mesa Petroleum Co., 493 A.2d 946, 955 (Del. 1985) (recognizing that "the basic principle that corporate directors have a fiduciary duty to act in the best interests of the corporation's stockholders"). *See also* Matthew T. Bodie, *The Next Iteration of Progressive Corporate Law*, 74 WASH. & LEE L. REV. 739, 762 (2017) (arguing that the Chancery Court's 2010 eBay decision has made it clear that Delaware law is committed to shareholder primacy); Leo E. Strine, Jr., *The Dangers of Denial: The Need for A Clear-Eyed Understanding of the Power and Accountability Structure Established by the Delaware General Corporation Law*, 50 WAKE FOREST L. REV. 761, 768 (2015) (arguing that under Delaware law, corporate directors are required to focus on shareholder welfare as their "sole end"); E. Norman Veasey, *Should Corporation Law Inform*

be nothing but cheap talk.[13] PBCs, on the other hand, are legally bound to pursue the public benefits specified in their charters. This legal obligation—so the narrative goes—allows PBCs to send a credible signal to investors, customers, and employees that they are fully and truly committed to their stated public benefit.[14]

Aspirations for Good Corporate Governance Practices-or Vice Versa?, 149 U. PA. L. REV. 2179, 2184 (2001) (asserting that Delaware law requires directors to act "in the best interests of the corporation and its stockholders"); Stephen M. Bainbridge, *Director Primacy in Corporate Takeovers: Preliminary Reflections*, 55 STAN. L. REV. 791, 798-813 (2002) (arguing that Delaware law is more appropriately understood to embrace "director primacy" than shareholder primacy). *But see* Jill E. Fisch & Steven Davidoff Solomon, *Should Corporations Have A Purpose?*, 99 TEX. L. REV. 1309, 1332 (2021) (arguing that that under Delaware law, shareholder primacy is limited to very specific areas); Lyman Johnson, *Pluralism in Corporate Form: Corporate Law and Benefit Corps.,* 25 REGENT U. L. REV. 269, 274 (2013) (arguing that the cases cited in favor of shareholder primacy are "highly ambiguous"); David K. Millon, *Two Models of Corporate Social Responsibility*, 46 WAKE FOREST L. REV. 523, 526 (2011) (claiming that Delaware law suggests the corporation exists for more than just shareholders); David G. Yosifon, *Opting Out of Shareholder Primacy: Is the Public Benefit Corporation Trivial?*, 41 DEL. J. CORP. L. 461, 507 (2017) (arguing that under Delaware law, shareholder primacy is merely a default norm). Moreover, as a practical matter, the principle of shareholder primacy rarely constitutes an obstacle to taking into account the interests of other constituencies. *Cf.* Leo E. Strine, Jr. & Nicholas Walter, *Conservative Collision Course?: The Tension Between Conservative Corporate Law Theory and Citizens United,* 100 CORNELL L. REV. 335, 350 n.38 (2015) (noting that while Delaware law requires directors to maximize shareholder wealth, it leaves corporate boards with "broad discretion" on how to do so); Einer Elhauge, *Sacrificing Corporate Profits in the Public Interest,* 80 N.Y.U. L. REV. 733, 738 (2005) (arguing that "[c]orporate managers have never had an *enforceable* legal duty to maximize corporate profits") (emphasis added). To be on the safe side, the board only needs to declare that protecting these constituencies is in the shareholders' long-term interest. *See, e.g.,* Jeff Schwartz, *De Facto Shareholder Primacy*, 79 MD. L. REV. 652, 670 (2020) (arguing that even "empty statements" about its commitment to shareholder value will protect the board).

[13] For example, critics of the Business Roundtable's 2019 Statement on the Purpose of a Corporation argue that the signatories of that statement engage in nothing more than cheap talk. *See, e.g.*, Anat Alon-Beck, *Times They Are A-Changin': When Tech Employees Revolt!*, 80 MD. L. REV. 120, 127 (2021) (suggesting that many of the CEOs signing the Roundtable Statement probably did so "for public relations purposes"); Lucian A. Bebchuk & Roberto Tallarita, *Will Corporations Deliver Value to All Stakeholders?*, 75 VAND. L. REV. 1031, 1035 (2022) (arguing "that the [Roundtable Statement] was largely for show"); Lucian A. Bebchuk & Roberto Tallarita, *The Illusory Promise of Stakeholder Governance*, 106 CORNELL L. REV. 91, 98 (2020) (arguing the CEOs signing the Roundtable Statement did so "mostly for show" and did not expect it "to bring about significant changes").

[14] *See, e.g.*, John Armour et al., *Green Pills: Making Corporate Climate Commitments Credible*, 65 ARIZ. L. REV. 285, 319 (2023) (noting that by incorporating as a PBC, a corporation signals its willingness to "temper maximization of profits" in order to pursue public benefits); Michael B. Dorff, *Why Public Benefit Corporations?,* 42 DEL. J. CORP. L. 77, 107 (2017) (arguing that "[e]mployees and customers … should see PBC status as some signal of an intent to favor their interests and the interest of the public benefit the company has adopted, even if the signal is muddy"); David Nows & Jeff Thomas, *Delaware's Public Benefit Corporation: The Traditional VC-Backed Company's Mission-Driven Twin*, 88 UMKC L. REV. 873, 900 (2020) (arguing that their public purpose can make PBCs "more attractive to socially responsible investors" and will also "provide branding advantages" vis-à-vis consumers); Alicia E. Plerhoples, *Nonprofit*

In practice, however, the statutory default rules governing PBCs have significant limitations that thoroughly undermine their commitment value.[15] The laws of Delaware, where all publicly traded PBCs are currently incorporated, illustrate this point. Under Delaware law, a PBC can revert back to being a regular business corporation through a simple charter amendment.[16] And, even without such an amendment, PBCs may de facto abandon their social goals due to investor pressure.[17]

In theory, the law gives PBCs the ability to enhance their commitment to their stated public benefits by including appropriate provisions in their charters.[18] The crucial issue, therefore, is whether that is happening in practice. In other words, do PBCs make use of their charters to strengthen their commitment to their stated public benefits? To answer this question, I have hand-collected and hand-coded a novel dataset of more than 300 corporate charters. The dataset includes all non-SPAC[19] public benefits corporations that were publicly traded on or before December 31, 2023—nineteen in total. It also

[17] *Id.*

[18] *Id. See also* Dorff, *supra* note 14, at 107 (arguing that "[f]ounders who find [the] signal [inherent in PBC statutes] too weak can remedy the problem to some degree with private ordering").

[19] I exclude so-called special purpose acquisition companies (SPACs) that have not yet completed their initial acquisition because pre-acquisition SPACs follow a different corporate governance model that makes them ill-suited for comparisons with other companies. For an overview of the governance of pre-acquisition SPACs see, for example, Michael Klausner et al., *A Sober Look at SPACs*, 39 YALE J. ON REG. 228, 235–46 (2022) (explaining SPAC governance); Usha Rodrigues & Mike Stegemoller, *Exit, Voice, and Reputation: The Evolution of SPACs*, 37 DEL. J. CORP. L. 849, 870–79 (2013) (explaining SPAC governance).

contains, for each PBC for which financial data are available, twenty matched regular business corporations.[20] The matching process identifies business corporations that are incorporated in the same state as the PBCs (Delaware), have been publicly traded for the same number of years, and are similar in terms of their size.[21]

To ascertain whether PBCs make strategic use of charter provisions to strengthen their commitment to their stated public benefits, I compare the PBC charters to those of the matched regular business corporations. The picture that emerges from this analysis is complex and shows substantial heterogeneity across different PBCs. Some PBC charters contain multiple provisions with the potential to strengthen the corporation's commitment to social or environmental causes.[22] Examples include supermajority provisions that make it more difficult to convert the PBC back into a regular business corporation or dual-class voting provisions, which allow controllers to defend their vision of a public-spirited corporation against pressure from capital markets and activist investors. Other PBC charters do not include any provisions suitable to strengthen the PBC's commitment to its stated public benefit(s). And most PBCs fall somewhere between these two extremes.

This paper also explores non-legal mechanisms that can help commit PBCs to their stated public goals. These include the composition of their boards, their ESG ratings, and certification by B Lab, a private non-profit organization that provides a seal of approval if a PBC's social and environmental impact meets certain standards.[23] Admittedly, B-Lab certification and ESG ratings are based solely on information available at the time the firm is certified or rated. They do not directly limit the corporation's ability to change course in the future. However, the loss of a corporation's B Lab certification or plunging ESG scores would amount to a (fuzzy) signal about the firm's change of course and could therefore generate substantial adverse publicity.[24] As with legal commitment

[20] For two of the nineteen PBCs, financial data are not (yet) available. They are therefore disregarded for matching purposes and excluded from any comparisons between regular business corporation charters and PBC charters. However, I include the relevant two PBC charters in all analyses that focus solely on PBC charters. Regarding the set of matchable PBCs and matched regular business corporation, the total size of that set is 17 + 17 x 20 = 357. However, because the matching process occurs with replacement, some of the matched regular business corporations form part of more than one match. Therefore, the total number of distinct regular business corporation charters included in the matched set is 296.
[21] The details of the matching process are explained *infra* Part III. A corporation's age is defined as the number of years that the corporation has been publicly traded. *See, infra*, Table A.2. A corporation's size is given by its total assets. *See, infra*, Table A.1.
[22] *See infra* Part V.
[23] *See infra* Part VI.
[24] For a more detailed analysis of this issue see *id.* Note that the signal is fuzzy because a corporation can decline to get recertified as a B Corp without changing any of its governance or business practices. Hence, observing that a corporation has failed to get recertified does not provide observers with absolute certainty that the corporation is now less invested in its

mechanisms, the use of non-legal commitment mechanisms varies substantially across PBCs.

What explains the observed heterogeneity in charter design? To begin with, there may not be one uniform optimal level of commitment; instead, different levels of commitment may be optimal for different PBCs. Lawyers' varying degrees of experience with designing PBC charters could also play a role. To explore the relevance of lawyers' experience, I use hand-collected data on the law firms advising PBCs on their going-public transactions.[25] Tellingly, the vast majority of such law firms have only ever been involved in one such transaction.[26] Accordingly, they may lack prior experience with publicly traded PBCs.[27] Moreover, I find that the level of experience that law firms have at the time that they advise PBCs on their going-public transaction is positively correlated, in a statistically significant way, with the level of legal commitment.

This Article's findings have important policy implications. Many scholars have proposed making the statutory rules governing PBCs more rigorous.[28] The results presented in this article suggest that such calls for reform are premature, at least with respect to PBCs that are publicly traded. To begin with, the vast majority of publicly traded PBCs—fifteen out of nineteen, or approximately 79%—use at least one meaningful commitment device, be it supermajority requirements protecting the company's PBC status, dual-class shares, or B Lab certification. This finding alleviates fears voiced in the literature that corporations merely use their PBC form for greenwashing.[29]

Moreover, the heterogeneity of PBC charters provides a valuable opportunity to evaluate the performance of different commitment mechanisms over time. As threats to the social purpose of different PBCs emerge, lawmakers, courts, and scholars can observe which commitment mechanisms prove effective and which ones do not. They will also learn more about the costs and potential

stated public benefit(s). Similarly, ESG ratings can change without any substantive change in business or governance practices. For example, a corporation may obtain a lower rating if it fails to provide rating providers with pertinent information.

[25] *See infra* Part VII.

[26] This does not rule out, of course, that the relevant firms and attorneys have gained experience with PBCs in other ways, e.g., by providing legal advice to privately held PBCs.

[27] *See infra* Part VII Tables 8 & 9.

[28] *See, e.g.*, Ofer Eldar, *The Role of Social Enterprise and Hybrid Organizations,* 2017 COLUM. BUS. L. REV. 92, 191 (2017) (suggesting that benefit corporations be required to obtain certification); Ellen Berrey, *Social Enterprise Law in Action: Organizational Characteristics of U.S. Benefit Corporations*, 20 TRANSACTIONS: TENN. J. BUS. L. 21, 100 (2018) (arguing for "[c]reating a higher threshold [in the form of statutes] to becoming a benefit corporation"); J. Haskell Murray, *An Early Report on Benefit Reports,* 118 W. VA. L. REV. 25, 47–48 (2015) (arguing that states should impose stricter reporting requirements); Joseph W. Yockey, *Does Social Enterprise Law Matter?,* 66 ALA. L. REV. 767, 821 (2015) (arguing that "states should also require an independent social audit rather than leave it to benefit corporations to provide their own assessments against a third-party standard").

[29] *See, e.g.*, Yockey, *supra* note 28 at 807 (noting that "one worry is that benefit corporations will use the form only as a vehicle for 'cheap talk' or greenwashing").

unforeseen consequences of individual commitment mechanisms. In other words, the current diversity in commitment levels should be viewed as a useful field experiment that should not be ended too quickly.

Additionally, my results on the role of lawyer experience suggest that as lawyers become more proficient in designing PBC charters, the level of legal commitment may increase on its own, thereby obviating the need for regulatory intervention. Incidentally, if the heterogeneity of PBC charters persists even as lawyers gain more experience, this would suggest that there may be no single optimal level of commitment for all firms. This insight would not militate against all types of regulatory intervention but would certainly weaken the case for any one-size-fits-all approach.

This Article is structured as follows: Part I provides some background on ESG and public benefit corporation statutes. Part II describes the dataset. Part III provides basic descriptive statistics about the firms included in the dataset. Part IV explains why Delaware's statutory defaults provide little assurance that PBCs will remain committed to their public purpose. Part V analyzes the extent to which PBC charters are designed to overcome the limitations of the legal default rules and strengthen PBCs' commitment to their social purpose. Part VI discusses non-legal signaling devices that may serve as a substitute for effective legal constraints. Part VII analyzes the role of law firms. Part VIII focuses on the potential downsides of more effective legal commitments. Part IX explains the implications of my analysis.

I. The Rise of Public Benefit Corporations

The rules governing public benefit corporations differ across states, and this regulatory heterogeneity extends to the statutes' names. Many statutes refer to the relevant entities simply as "benefit corporations."[30] Other statutes—including Delaware's—use the term "public benefit corporation."[31] For

[30] *E.g.*, MD. CORPS. & ASS'NS CODE ANN. §§ 5-6C-01 et seq. The term "benefit corporation" is typically used in states that have based their PBC legislation on the so-called Model Benefit Corporation Act. The Model Benefit Corporation Act (MBCA) was drafted by attorney Bill Clark. J. Haskell Murray, *Social Enterprise Innovation: Delaware's Public Benefit Corporation Law*, 4 HARV. BUS. L. REV. 345, 346 (2014). The Model Benefit Corporation Act's text is reprinted in William H. Clark, Jr. & Larry Vranka, *The Need and Rationale for the Benefit Corporation: Why it is the Legal Form That Best Addresses the Needs of Social Entrepreneurs, investors, and, Ultimately, the Public*, White Paper (Jan. 18, 2013), *available at* https://growthorientedsustainableentrepreneurship.wordpress.com/wp-content/uploads/2016/07/gv-white-paper-need-and-rationale-for-benefit-corporations.pdf [https://perma.cc/285U-CSTK]. *See generally* Ryan Z. Ullman, *Making Benefit Corporations More Beneficial: Drafting Statutes to Entice Entrepreneurs and Consumers Alike*, 14 J. BUS. & TECH. L. 45, 67 (2018) (noting that "[m]any states' benefit corporation statutes closely resemble the B Lab's model legislation, but five states' statutes . . . follow a model originating in Delaware").
[31] 2013 Delaware Laws Ch. 122 (S.B. 47), approv. July 17, 2013, eff. August 1, 2013.

simplicity, this Article uses the expression "public benefit corporation" throughout.

In 2010, Maryland became the first state to enact a public benefit corporation statute.[32] Other states quickly followed,[33] including Delaware, whose public benefit corporation statute went into effect on August 1, 2013.[34] As of December 31, 2023, the cutoff date for this study, forty-two states and the District of Columbia had adopted some form of public benefit corporation legislation.[35] A driving force behind the proliferation of public benefit corporation statutes is B Lab, a non-profit organization that has been lobbying for their enactment since 2008.[36] Despite the large number of jurisdictions that have enacted such statutes, all PBCs that are, or have been, publicly traded are incorporated in Delaware. Accordingly, the focus of this study is on Delaware law.

[32] 2010 Maryland Laws Ch. 97 (S.B. 690). The relevant provisions are now codified in MD. CORPS. & ASS'NS CODE ANN. §§ 5-6C-01 et seq.

A. The Rules Governing Public Benefit Corporations

All publicly traded PBCs that went public on or before January 31, 2024, are incorporated in Delaware. This is not particularly surprising given that Delaware is the leading state of incorporation for publicly traded corporations in general: more than half of all publicly traded corporations are incorporated there.[38]

1. How Are Delaware PBCs Formed?

Under Delaware law, a PBC is a corporation whose charter contains two special provisions: one stating that the corporation is a public benefit corporation and the other specifying the public benefit that the PBC pursues.[39] Entrepreneurs can form a public benefit corporation at the time of incorporation by including the relevant provisions in the corporate charter. Alternatively, an existing general business corporation can be converted into a public benefit corporation. Such a conversion is accomplished through a charter amendment, which must be approved both by the board and by a simple majority of the outstanding shares.[40] Crucially, converting into a PBC is not a

487 (13-S 1049), approv. July 16, 2013, eff. Jan. 1, 2014; 2012 South Carolina Laws Act 277 (H.B. 4766), approv. June 14, 2012, eff. June 14, 2012; 2015 Tennessee Laws Pub. Ch. 497 (S.B. 972), approv. May 20, 2015, eff. January 1, 2016; 2017 Tex. Sess. Law Serv. Ch. 776 (H.B. 3488) (Vernon's), approv. June 14, 2017, eff. Sept. 1, 2017; 2014 Utah Laws Ch. 394 (S.B. 133), approv. April 1, 2014, eff. May 13, 2014; 2010 Vermont Laws No. 113 (S. 263), approv. May 19, 2010, eff. July 1, 2011; 2011 Virginia Laws Ch. 698 (H.B. 2358), approv. March 26, 2011, eff. July 1, 2014; 2012 Wash. Legis. Serv. Ch. 215 (S.H.B. 2239) (West), approv. March 30, 2012, eff. June 7, 2012; 2014 West Virginia Laws Ch. 17 (S.B. 202), approv. March 31, 2014, eff. July 1, 2014; 2017-2018 Wisc. Legis. Serv. Act 77 (2017 S.B. 298) (West), enacted Nov. 27, 2017, eff. Feb. 26, 2018.

[38] *E.g.*, Jens Dammann, *Fee-Shifting Bylaws: An Empirical Analysis*, 65 J.L. & ECONS. 1, 2 (2022); Jens Dammann, *State Competition for Corporate Headquarters and Corporate Law: An Empirical Analysis*, 80 MD. L. REV. 214, 236 (2020) [hereinafter Dammann, *State Competition*]. The percentage is even higher for firms having their initial public offering ("IPO firms"). *See, e.g.*, Jens Dammann & Matthias Schündeln, *The Incorporation Choices of Privately Held Corporations*, 27 J.L. ECON. & ORG. 79, 87 (2011) (finding that in the years 2007 and 2008, 88% of corporations having their IPO were incorporated under Delaware law); Robert Daines, *The Incorporation Choices of IPO Firms*, 77 N.Y.U. L. REV. 1559, 1571–72 (2002) (analyzing IPOs between 1978 and 2000 and finding that roughly 65% were incorporated under Delaware law).

[39] DEL. CODE ANN. TIT. 8, § 362(a) (West 2022).

[40] Delaware law originally required that 90% of the outstanding shares approve such a conversion. *See* 2013 Delaware Laws Ch. 122 (S.B. 47), approved July 17, 2013, eff. Aug. 1, 2013 (inserting a new section 363(a) according to which a 90% shareholder vote was necessary to convert a regular Delaware corporation into a PBC). However, in 2015, Delaware lowered the shareholder approval requirement to two-thirds of the outstanding shares. 2015 Delaware Laws Ch. 40 (S.B. 75), approved June 24, 2015, eff. Aug. 1, 2015 (replacing the 90% approval in section 363(a) requirement with a two-thirds approval requirement). And since 2020, converting a Delaware business corporation into a PBC requires only a charter amendment adopted according to the general rule. *See* 2020 Delaware Laws Ch. 256 (H.B. 341), approved July 16, 2020, eff. July 16, 2020 (eliminating the shareholder approval requirement

one-way street. Just as it only takes a charter amendment to turn a regular business corporation into a PBC, a charter amendment is also all that is needed to convert a PBC into a regular business corporation.[41]

2. The Balancing Requirement

When a PBC's board of directors makes business decisions, it is legally required to balance the goal of profit maximization with the interests of those affected by the corporation's conduct and the specified public benefit(s).[42]

What happens if the board fails to satisfy this balancing requirement? It is worth noting, first, that third parties, such as communities or environmental groups, cannot enforce the public benefit provision.[43] That remains true even if the relevant third parties are the beneficiaries of the PBC's stated public benefit.[44] For example, even if a PBC's charter explicitly states that the public benefit is supporting economic development in a particular city, that city cannot resort to litigation if the public benefit corporation fails to follow through on its stated commitment.

In contrast, the PBC's stockholders can bring suit if the board fails to satisfy the balancing requirement.[45] However, any shareholder litigation aimed at enforcing the public benefit commitment is subject to several key limitations. To begin with, the plaintiff shareholders must collectively own either 2% of the corporation's outstanding shares or shares with a market value of $2 million.[46] Moreover, when balancing interests, corporate directors enjoy a level of protection that is very similar to that granted by the business judgment rule. Under the business judgment rule, a director satisfies their fiduciary duties as long as their decision is informed, disinterested, and taken in good faith.[47] Under

in section 363). This means that the amendment must be approved by a simple majority of the outstanding shares. *See* DEL. CODE ANN. TIT. 8, § 242(b) (West) (providing that after a corporation has received payment for its stocks, a charter amendment must be approved by a majority of the outstanding shares entitled to vote).

[41] Davidoff Solomon & Fisch, *supra* note 16, at 87.

[42] *E.g.*, DEL. CODE ANN. TIT. 8, §§ 362(a) (West 2022). Other states' PBC statutes take the same approach. *See, e.g.*, COLO. REV. STAT. ANN. §§ 7-101-503 (1) (West 2022); KAN. STAT. ANN. § 17-72a02(a) (West 2022).

[43] *See* DEL. CODE ANN. TIT. 8, § 365(b) (West 2022) (providing that the directors have no duty to any person on account of that person's interests being impacted by the public benefit specified in the charter); *id.* § 367 (West 2022) (limiting enforcement actions under this section to shareholders).

[44] *See* sources cited *supra* note 43.

[45] *Id.* § 367.

[46] *Id.* § 367(1). If the corporation's shares are not listed on a national securities exchange, the $2,000,000 rule does not apply, and the plaintiffs must collectively own 2% of the corporation's outstanding stock. *Id.*

[47] *See, e.g.*, Kahn on Behalf of DeKalb Genetics Corp. v. Roberts, 679 A.2d 460, 465 (Del. 1996) (holding that "[t]he business judgment rule normally protects all lawful actions of a board of directors, provided they were taken in good faith, after a reasonable deliberative process and

Delaware's law on public benefit corporations, a director's balancing decision satisfies the director's duties as long as the decision is informed, disinterested, "and not such that no person of ordinary, sound judgment would approve."[48] In other words, regarding the balancing requirement, Delaware's PBC law replaces the business judgment rule's good faith requirement with a generously worded reasonableness test. Moreover, failing to protect the stated public benefit or interests of other stakeholders often does not cause the shareholder plaintiff to suffer any financial loss, meaning the PBC directors may not have to fear liability for damages. Exculpation clauses in the charter can provide additional protection to directors: as long as the director's decision was disinterested, a failure to balance will not cause the director to lose the protection of an exculpation clause.[49]

B. How Many Public Benefit Corporations Are There?

In their published statistics, states do not distinguish between general business corporations and PBCs.[50] That makes the number of privately held PBCs currently in existence impossible to determine.[51] This paper, however, focuses exclusively on publicly traded PBCs. Publicly traded PBCs are registered with the Securities Exchange Commission ("SEC"), which means that their SEC filings are publicly available via the SEC's EDGAR database.[52] As a result, I have been able to use full-text searches to identify all publicly traded PBCs that existed on or prior to December 31, 2023, the cutoff date for this study.

The first publicly traded public benefit corporation was Laureate Education, Inc., which had its initial public offering ("IPO") on February 1st, 2017.[53] Since then, the number of publicly traded non-SPAC PBCs has grown to nineteen.[54] This number remains small in absolute terms. Moreover, as the total number of

in the absence of conflicts of interest"); Aronson v. Lewis, 473 A.2d 805, 812 (Del. 1984), overruled by Brehm v. Eisner, 746 A.2d 244 (Del. 2000) (holding that the business judgment rule "is a presumption that in making a business decision the directors of a corporation acted on an informed basis, in good faith and in the honest belief that the action taken was in the best interests of the company").

[48] DEL. CODE ANN. TIT. 8, § 365(b) (West 2022).

[49] *Id.* § 365(c).

[50] *See, e.g.*, DELAWARE DIVISION OF CORPORATIONS, 2022 ANNUAL REPORT 2 (2023) (lumping all corporations into the same category).

[51] The last government data published on this issue dates to April 2015, when there were at least 2,144 PBCs. Ellen Berrey, *How Many Public Benefit Corporations Are There?,* SSRN Working Paper, https://ssrn.com/abstract=2602781 [https://perma.cc/64R2-86HW].

[52] US SECURITIES AND EXCHANGE COMMISSION, EDGAR | Company Filings | Company and Person Lookup, https://www.sec.gov/edgar/searchedgar/companysearch.

[53] *See* US SECURITIES AND EXCHANGE COMMISSION, EDGAR | Company Filings | Company Search Results | Laureate Education, https://www.sec.gov/edgar/browse/?CIK=912766&owner=exclude.

[54] *See infra* Table 2.

U.S. IPOs has collapsed, from 1035 in the year 2021 to a mere 154 in the year 2023,[55] the proliferation of PBCs has slowed as well.[56] However, given that publicly traded PBCs are still a relatively new phenomenon, their growth over just the last seven years suggests that they may account for a much greater share of publicly traded firms in the coming decades. Consistent with this prediction, recent work by Michael Dorff, James Hicks, and Steven Davidoff Solomon demonstrates that very significant funding from mainstream, top-tier venture capital funds is flowing to privately held PBCs.[57] Sooner or later, these privately held firms may go public, adding to the number of publicly traded PBCs.

Table 2: Publicly Traded (Non-SPAC) Public Benefit Corporations by Year

Year	New Publicly Traded PBCs	Registration Termination	Running Total
2017	1	0	1
2018	0	0	1
2019	0	0	1
2020	3	0	4
2021	10	0	14
2022	5	1	18
2023	1	2	17

Note: Only one pre-acquisition SPAC was incorporated as a PBC. That entity is not included in the above numbers. By contrast, publicly-traded PBCs that have resulted from the merger of publicly traded SPAC with a privately held corporation are included.

II. The Dataset

To construct the dataset for this study, I first identified all publicly traded PBCs by using a keyword search on the SEC's EDGAR database.[58] My search

[55] *See* Stock Analysis, IPO Statistics, https://stockanalysis.com/ipos/statistics/ [https://perma.cc/R8PJ-8BAH] (showing that the number of IPOs fell from 1035 in 2021 to 181 in 2022 and 154 in 2023).
[56] *See infra* Table 2.
[57] Michael B. Dorff et. al., *The Future or Fancy? An Empirical Study of Public Benefit Corporations*, 11 HARV. BUS. L. REV. 113, 158 (2021) (relying on a hand-collected sample of 295 "Delaware-registered PBCs that received investment between 2013 and 2019" and finding that these PBCs "received investment from VC funds amounting to over $2.5 billion in the aggregate . . . not just from niche, pro-social VCs but from mainstream, top-tier investors").
[58] US SECURITIES AND EXCHANGE COMMISSION, EDGAR | Company Filings | Company and Person Lookup, https://www.sec.gov/edgar/searchedgar/companysearch.

yielded twenty PBCs. One of these twenty PBCs is a so-called pre-acquisition SPAC. SPACs, or "Special Purpose Acquisition Companies," are publicly traded entities without an operating business of their own.[59] Their sole purpose lies in merging with a privately held company and helping the latter become publicly traded without the need for an IPO.[60] Prior to the initial acquisition, SPACs share a peculiar set of governance features, such as redemption rights for investors.[61] Their particular governance structure makes it difficult to compare pre-acquisition SPACs to other corporations, so I exclude pre-acquisition SPACs from my dataset.

The word "pre-acquisition" is key here. Once a SPAC has merged with a privately held company, thereby allowing the latter to go public without an IPO, the resulting company is just another publicly traded corporation with an operating business.[62]

After excluding the one pre-acquisition SPAC PBC from my set of publicly traded PBCs, nineteen PBCs remained. For each of these companies, I used the SEC's EDGAR database to identify the year that the PBC was first publicly traded as a PBC, its unique CIK identification code, its state of incorporation, and its certificate of incorporation.[63] Notably, all publicly traded PBCs are incorporated in Delaware.

I then matched each of the PBCs with twenty regular business corporations for comparison. To do so, I proceeded as follows: first, I used the CIK code to link each PBC with firm-level data from CRSP Compustat Merged ("CCM").[64] Using the resulting dataset, I used propensity score matching to match each PBC with twenty regular business corporations that have been publicly traded for the same number of years, are incorporated in the same state (Delaware), and provide the closest possible match in total assets.[65] I then relied on the EDGAR database to retrieve the certificates of incorporation of all matched non-PBC corporations. Unfortunately, for two of the PBCs in my dataset, financial data

[59] *E.g.*, Mira Ganor, *The Case for Non-Binary, Contingent, Shareholder Action*, 23 U. PA. J. BUS. L. 390, 409 (2021); Usha Rodrigues & Mike Stegemoller, *Exit, Voice, and Reputation: The Evolution of SPACs,* 37 DEL. J. CORP. L. 849, L.871 (2013); Emily Strauss, *Suing SPACs*, 96 S. CAL. L. REV. 553, 555 (2023).

[60] *E.g.*, Michael Klausner et. al., *supra* note 19, at 235; Amanda M. Rose, *SPAC Mergers, IPOs, and the PSLRA's Safe Harbor: Unpacking Claims of Regulatory Arbitrage*, 64 WM. & MARY L. REV. 1757, 1763 (2023); Strauss, *supra* note 59, at 555.

[61] *See* sources cited *supra* note 19.

[62] Therefore, companies where the SPAC has already merged do qualify for inclusion in the dataset.

[63] The CIK identification code is the identifier that the SEC assigns to companies when they originally filed with the SEC and that they are required to use for all subsequent SEC filings. In case of amendments to the certificate of incorporation, this paper uses the most recent version in effect in the year of interest.

[64] This dataset is available via Wharton Research Data Services [WRDS]. UNIV. OF PA., WHARTON RSCH. DATA SERVS. [WRDS], https://wrds-www.wharton.upenn.edu/.

[65] This paper matches "with replacement," which means that the same regular business corporation can function as a match for different PBCs.

are not (yet) available, preventing me from matching them with regular business corporations. The matching process yielded 340 regular business corporations. Note that the two PBCs for which financial data are not available can still be used to the extent that my analysis focuses exclusively on PBC charters. It is only for comparative analyses, which examine the differences between PBCs and their matching regular business corporations, that the two unmatched PBCs must be excluded.

Corporations may amend their certificates over time. Therefore, with respect to both PBCs and matching corporations, I used the most recent versions that were in effect in the calendar year of interest. For the PBCs, the year of interest is the first calendar year in which the PBC was publicly traded as a PBC. For the regular business corporations, the year of interest is determined by the PBC with which they are matched. For example, if the corporation was first traded as a PBC in 2021 and if the charter amendment that turned the corporation into a PBC went into effect on November 1st, 2021, I focused on the corporation's charter as amended on November 1, 2021.

Finally, I coded the combined dataset by hand to determine which types of charter provisions the various charters contain. All variable definitions are included in the Appendix.[66]

III. Descriptive Statistics

Before delving into the governance arrangements of publicly traded PBCs, it is helpful to consider some basic information about the companies in the dataset.

A. Summary Statistics

Table 3 displays summary statistics about both the PBCs and the matched regular business corporations included in the dataset. Applying the conventional 5% level of statistical significance, the group differences are not statistically significant for most of the financial measures.[67]

The two exceptions are the dividends-over-assets ratio and book leverage, both of which are higher for regular business corporations than for PBCs. While any explanation of these differences necessarily remains conjectural, the observed differences are consistent with the narrative that PBCs focus less exclusively on shareholder wealth maximization than regular business

[66] *Infra* Appendix Table A.1 (defining financial variables) and Table A.2 (defining non-financial variables).
[67] Because of the different sample sizes, I use Welch's t-test to determine whether the differences in sample means are statistically significant.

corporations. Thus, one can hypothesize that PBCs tend to pay fewer dividends because they expect to spend funds on their social objectives.

Book leverage is defined as the ratio of total liabilities over total assets.[68] High book leverage means that managers have lower free cash flow, implying that managers have less leeway to pursue goals other than profit maximization.[69] Accordingly, consistent with this paper's observation, one would expect book leverage to be higher in regular business corporations, which are meant to focus on shareholder wealth, than in PBCs, which are intended to pursue a more complex set of goals.

[68] *Infra* Appendix Table A.1.
[69] *See, e.g.*, Michael C. Jensen, *Takeovers: Their Causes and Consequences*, 2 J. ECON. PERSP. 21, 30 (1988) (pointing out that high leverage translates into lower free cash flow and can thereby reduce agency costs).

Table 3: Summary Statistics

	Public Benefit Corporations		Business Corporations		Difference
	Obs.	Mean	Obs.	Mean	
Firm age	17	3.53	340	3.53	0.00
Assets	17	1.70	340	1.14	-0.56
Market equity	17	4265.59	340	2361.50	-1904.09
Employees	17	0.00	337	0.00	-0.00
Total liabilities	17	0.29	340	0.34	0.05
Tangibility	17	0.17	339	0.14	-0.03

Book leverage	17	0.12	340	0.23	0.12**
Fin. leverage	17	0.12	340	0.16	0.04
Return on assets	17	-0.17	339	-0.11	0.05
Return on equity	17	-0.40	339	-0.72	-0.31
Tobin's q	17	3.87	340	3.17	-0.70
Cap. exp./assets	16	0.08	340	0.03	-0.05

Notes: All variables are defined in Table A.2 in the Appendix. All variables refer to the year of interest. For the PBCs, the year of interest is the calendar year in which they were first publicly traded. For the regular business corporations, the calendar year of interest is the same as for the PBC with which they were matched. Welch's t-test is used to determine statistical significance. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

B. How do PBCs Become Publicly Traded?

There are different ways in which a privately held company can go public. The traditional approach is to have an initial public offering ("IPO") in which newly issued shares are sold to the public at large with the help of one or more

investment banks acting as underwriters.[70] IPOs are tightly regulated by federal securities law.[71] Of particular relevance is Section 11 of the Securities Act, which imposes strict liability for material misstatements or omissions in the company's registration statement.[72]

Alternatively, to avoid the IPO process, a privately held company can merge with another company that is already publicly traded. In particular, as previously mentioned, it can merge with a so-called SPAC.[73] In 2022, pre-acquisition SPACs going public accounted for 59% of US IPO proceeds.[74] Since then, however, disappointing returns[75] and an increasing awareness of the deeply flawed governance structure of SPACs[76] have caused investors' appetite for SPACs to decline precipitously.[77] In the year 2023, SPACs' share of IPO proceeds dropped to 15%.[78]

A third option for companies going public is a so-called direct listing. In the case of a direct listing, a company goes public without issuing new shares.[79] Thus, the shares that are traded are the shares that are already held by the corporation's existing shareholders.[80] A direct listing does not require the

company to involve underwriters.[81] Moreover, Section 11 of the Securities Act does not apply.[82]

The nineteen publicly traded PBCs have chosen a variety of ways to go public.[83] Table 4 displays the relevant numbers. Three companies were already publicly traded when they converted from regular business corporations into PBCs. Nine PBCs had a traditional IPO. Five PBCs went public by merging with a SPAC, and two chose a direct listing.

Table 4: How Do PBCs Become Publicly Traded

IPO	9
Merger with SPAC	5
Midstream conversion into PBC	3
Direct listing	2

Note: Included under midstream conversions is a case in which a publicly traded business corporation was converted midstream into the subsidiary of a publicly traded PBC.

IV. The Challenge of Maintaining the PBC's Public Commitment

When a PBC's board of directors makes business decisions, it is legally required to balance the goal of profit maximization with the interests of those affected by the corporation's conduct, and the specified public benefit(s).[84] Yet despite this clear legal obligation, a closer examination shows that Delaware's default rules ultimately offer little assurance that PBCs are and will remain committed to their specified public benefits.

A. The Governance Structure

The fundamental challenge to assuring that PBCs will remain committed to their public benefits lies in PBCs' governance structure, which is centered around the shareholders. The shareholders elect the directors and thereby retain ultimate control of the PBC.[85] By contrast, neither the beneficiaries of the stated

[81] *E.g.*, Andrew F. Tuch & Joel Seligman, *The Further Erosion of Investor Protection: Expanded Exemptions, SPAC Mergers, and Direct Listings*, 108 IOWA L. REV. 303, 357 (2022); Horton, *supra* note 70, at 195.

[83] *Infra* Table 2.
[84] *E.g.*, DEL. CODE ANN. TIT. 8, § 362(a) (West 2022). Other states' PBC statutes take the same approach. *See, e.g.*, COLO. REV. STAT. ANN. § 7-101-503 (1) (West 2022); KAN. STAT. ANN. § 17-72a02(a) (West 2022).
[85] DEL. CODE ANN. TIT. 8, § 211 (West 2022).

public benefit nor any other non-shareholder constituencies have a say in how the PBC is run.

In practice, the goals of maximizing shareholder wealth do not necessarily conflict with the specified public benefit(s) or with the interests of those affected by the corporation. For example, measures taken in furtherance of the specified public benefit may yield reputational benefits. These reputational benefits, in turn, may allow the corporation to charge higher prices for its products or services and may also help the corporation recruit particularly qualified and dedicated employees. However, to the extent that shareholder wealth maximization and public purpose are in unison, there is no need for public benefit corporations in the first place. The real question is whether the law can ensure PBCs' commitment to non-shareholder constituencies once the latter's interests diverge from those of shareholders. And in this scenario, it turns out that Delaware's statutory defaults provide shareholders with ample opportunity to abrogate or subvert a PBC's commitment to non-shareholder constituencies. It is this issue to which I turn next.

B. Abrogating or Subverting a PBC's Social Purpose

Under the default rules governing Delaware PBCs, shareholders have a few ways of eliminating or undermining the PBC's social commitment.

The most obvious step is to seek a charter amendment that modifies the stated public benefit or converts the corporation into a regular business corporation.[86] A charter amendment requires not just shareholder approval but also a board resolution.[87] However, given that the shareholders elect the directors[88] and also have the power to remove directors with or without cause,[89] the need for a board resolution is unlikely to prove much of an obstacle as long as Delaware's default rules remain in place.

Even in the absence of a formal charter amendment, large shareholders or groups of shareholders may pressure the board to neglect the stated public benefit and instead focus on shareholder wealth maximization. In such a scenario, civic-minded individual shareholders may seek to enforce the corporation's social purpose by way of litigation.[90] However, as previously explained, such litigation faces substantial legal obstacles.[91]

Optimists may object that shareholders who invest in a public benefit corporation may be on board with the corporation's social purpose and are

---

[86] Davidoff Solomon & Fisch, *supra* note 16, at 87 (asserting that "the prospect of such conversions raises the potential of undermining a PBC's commitment to its social purpose").
[87] DEL. CODE ANN. TIT. 8, § 211 (West 2022) (requiring both a board resolution and shareholder approval for midstream charter amendments).
[88] *Id.* § 211.
[89] *Id.* § 141(k).
[90] *Id.* § 367.
[91] *Supra* Part I.B.2.

therefore unlikely to take action against it. However, even assuming that a PBC's current investors are and will remain satisfied with management sacrificing profits for the sake of the PBC's social purpose, there is always the specter of a change in control. Should the PBC's management sacrifice substantial profits, the corporation becomes an obvious target for hostile acquirers. Such acquirers know that if they manage to acquire a controlling stake, they can use their control to convert the corporation back into a regular business corporation, stop sacrificing profits to non-shareholder interests, and then sell their investment at a profit.

In sum, Delaware's statutory defaults provide little assurance that a PBC will remain committed to its public purpose.

V. An Analysis of PBC Charters

In theory, private ordering can solve or at least mitigate the problem of insufficient commitment. A PBC's charter can be purposefully designed to strengthen the PBC's commitment to its stated public benefit(s).

Most obviously, a PBC charter can contain supermajority requirements that make it more difficult to change the specified benefit or convert the corporation back into a regular business corporation.[92] Moreover, a PBC charter can provide for dual-class shares, which allow the founders to retain a majority of the votes even after selling the greater part of the PBC's equity.[93] Dual-class shares can keep the PBC committed to its public purpose as long as its founders share that commitment. Even in the absence of supermajority requirements and dual-class shares, the charter itself can strengthen the PBC's legal commitment to its social purpose. The charter can facilitate shareholder litigation aimed at enforcing the relevant public benefit.[94] Finally, the charter can include provisions, such as classified boards, that insulate the directors against shareholder pressure, at least in the short run.[95]

In sum, PBCs can rely on a rich menu of charter provisions to reinforce their commitment to their stated public benefit. The question, though, is whether PBCs actually include such provisions in their charters.

---

[92] DEL. CODE ANN. TIT. 8, § 102(b)(4) (West 2022) (providing that the corporation's certificate of incorporation may include provisions that impose supermajority voting requirements). For an in-depth discussion see *infra* Part V.A.

[93] DEL. CODE ANN. TIT. 8, § 212(a) (West 2022) (providing that each share has one vote "[u]nless otherwise provided in the certificate of incorporation). For a discussion of dual-class shares see *infra* Part V.B.

[94] *Infra* Part V.C.

[95] *Infra* Part V.D. *Cf.* DEL. CODE ANN. TIT. 8, § 141(d) (West 2022) (allowing charter provisions that divide the board into a maximum of three classes).

A. Charter Amendments

This section focuses on the most obvious problem, namely that public benefit corporations can amend their charter to change the specified benefit or even terminate their PBC status entirely.

In Delaware, such a charter amendment requires a board resolution and approval by a simple majority of the outstanding shares entitled to vote.[96] Steve Davidoff Solomon and Jill Fisch rightly point out that a PBC's ability to shed its PBC status by amending its charter constitutes a key factor limiting the PBC form's commitment value.[97] Why should customers, investors, or employees put their faith in a corporation's PBC status if that status can be terminated with relative ease at the next annual or special shareholder meeting?

PBC charters can include a supermajority requirement to make it more difficult to amend the corporation's PBC status and stated public benefit. But do PBC charters contain such supermajority requirements in practice? The answer is "mostly no." Of the nineteen PBC charters in the dataset, only five include a provision requiring a supermajority for amendments that would end the corporation's PBC status or modify its stated public benefit. This omission is even more glaring because thirteen of the remaining fourteen PBC charters contain supermajority requirements protecting other parts of the charter. Incidentally, note as a practical matter, all those PBC charters in the dataset that protect the PBC status via a supermajority requirement against amendments also extend that protection to specific wording of the public benefit.

B. Dual-Class Shares

A corporation's charter may utilize dual-class shares, meaning the corporation is authorized to issue two or more shares of common stock and that these different classes of common stock have different voting rights.[98] Dual-class stocks are a popular mechanism by which founders can cement their control over their company despite parting with a majority of the equity.[99] Accordingly, PBCs can use dual-class shares to strengthen their commitment to their stated public benefit: as long as the founders themselves remain committed

---

[96] *See* DEL. CODE ANN. TIT. 8, § 242(b) (West) (providing that after a corporation has received payment for its stocks, a charter amendment must be approved by a majority of the outstanding shares entitled to vote).

[97] Davidoff Solomon & Fisch, *supra* note 16, at 87 (asserting that "the prospect of such conversions raises the potential of undermining a PBC's commitment to its social purpose").

[98] DEL. CODE ANN. TIT. 8, § 212(a) (West 2022) (providing that each share has one vote "[u]nless otherwise provided in the certificate of incorporation). Of course, a corporation's certificate of incorporation can also authorize different classes of shares that have the same voting rights. *Cf.* DEL. CODE ANN. TIT. 8, § 102(a)(4) (West) (providing for the possibility of different classes of shares). However, for the purpose of this Article, the term "dual-class shares" is used solely for those cases, in which the different classes of shares have different voting rights. *See* Table A.2 in the Appendix (defining the term dual-class shares as used in this Article).

[99] See the sources cited *supra* note **Error! Bookmark not defined.**.

to that public benefit, dual-class shares securing the founders' control guarantee that the PBC remains committed as well.

Of the nineteen PBCs in the dataset, nine, or almost half, use dual-class shares. Moreover, comparing the PBCs with their matched regular business corporations, PBCs make more frequent use of dual-class shares than regular corporations, though that finding is not statistically significant.

Table 5: Dual-Class Shares

	Public Benefit Corps.		Regular Business Corps.		Difference
	Obs.	Mean	Obs.	Mean	
Dual-class shares	17	0.41	340	0.22	-0.19

Notes: All variables are defined in Table A.2 in the Appendix. Welch's t-test is used to determine statistical significance. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

Given that dual-class shares are, in fact, more frequently used by the PBCs in the sample, it is worth asking how charter provisions imposing supermajority requirements interact with dual-class share provisions. Recall that five of the nineteen PBC charters in the sample impose a supermajority requirement for charter amendments that cover the public benefit provision.

How does the use of such supermajority requirements overlap with dual-class share provisions? Of the nineteen PBC charters in the dataset, thirteen, or approximately 68%, contain at least one of the two provisions.

C. Shareholder Litigation

Delaware allows individual shareholders to initiate litigation if the directors fail to satisfy the law's balancing requirement. Thus, even if a majority of the shareholders pressure the board to focus on shareholder wealth maximization, a civic-minded minority can bring a shareholder lawsuit to enforce the PBC's public commitment.

However, as previously noted, such litigation faces substantial obstacles.[100] For example, the plaintiff shareholders must collectively own at least 2% of the corporation's outstanding shares or, alternatively, shares with a market value of $2 million.[101] Moreover, when balancing interests, corporate directors enjoy a

[100] *Infra* text accompanying notes 46–49.
[101] DEL. CODE ANN. TIT. 8, § 367(1) (West 2022). If the corporation's shares are not listed on a national securities exchange, the $2,000,000 rule does not apply, and the plaintiffs must collectively own 2% of the corporation's outstanding stock. *Id.*

level of protection that is very similar to that granted by the business judgment rule.[102]

In theory, PBC charters could take measures to facilitate litigation aimed at protecting the PBC's public interest commitment. For example, the charter could promise to reimburse the legal expenses of shareholder plaintiffs seeking to enforce the PBC's commitment to its stated public benefit(s).[103] However, none of the nineteen PBC charters contain any provisions facilitating shareholder litigation.

Even if PBC charters do not actively facilitate shareholder litigation aimed at enforcing the corporation's commitment to the stated public benefit, they may at least abstain from creating further obstacles for such litigation. Corporate charters may include various provisions that make shareholder litigation more difficult or protect directors against the effects of such litigation. For example, charters can include liability waivers or change the legal defaults on indemnification in the directors' favor. Hereinafter, I refer to these and similar provisions as anti-litigation provisions. This Part investigates whether PBC charters are less likely to rely on anti-litigation provisions than regular business corporation charters.

1. The Different Types of Anti-Litigation Provisions

The PBC and regular business corporation charters in the dataset include five types of charter provisions that may reduce the effectiveness of shareholder litigation.

(1) *Liability waivers.* Charters can protect directors against the consequences of litigation by including a liability waiver.[104] Under Delaware law, such a waiver will protect the directors even if they fail to balance the public interest against the goal of profit maximization as

[102] *Cf.* DEL. CODE ANN. TIT. 8, § 365(b) (West 2022) (providing that a director's balancing decision satisfies the director's duties as long as the decision is informed, disinterested, "and not such that no person of ordinary, sound judgment would approve").
[103] *See* DEL. CODE ANN. TIT. 8, § 102(f) (West) (prohibiting charter provisions that require the plaintiff shareholder to reimburse the corporation's expenses in incurred in connection with an internal corporate claim). From this provision, it follows—*e contrario*—that charter provisions requiring the corporation to reimburse shareholder plaintiffs are not per se illegal. The idea that it can be in the corporation's best interest to reimburse the expenses of stockholders challenging the board also finds an expression in Delaware's law on bylaws. The Delaware General Corporation Law explicitly allows for bylaws that require the board to reimburse insurgent shareholders for their expenses in waging a proxy contest against the corporation in connection with the election of directors. DEL. CODE ANN. TIT. 8, § 113 (West). This provision authorizes bylaws imposing a duty to reimburse insurgent shareholders who failed to win the proxy contest. Yucaipa Am. All. Fund II, L.P. v. Riggio, 1 A.3d 310, 356 n. 244 (Del. Ch. 2010), aff'd, 15 A.3d 218 (Del. 2011).
[104] DEL. CODE ANN. TIT. 8, 102(b)(7) (West).

long as the directors were disinterested and not entirely unreasonable.[105]

(2) *Mandatory indemnification.* If a current or former director is sued in their official capacity but succeeds in their defense, either on the merits or otherwise, the director has a right to be indemnified.[106] In all other cases, assuming that indemnification is not prohibited outright, Delaware's default rules give the corporation a choice on whether or not to indemnify the director.[107] However, when the corporation has the power to indemnify the director, the charter may turn that power into a duty.[108] Such provisions are known as mandatory indemnification provisions.[109]

(3) *Advancement of expenses.* The charter can also go beyond the legal default rules on indemnification by requiring the corporation to advance the director's expenses when the director is entitled to indemnification.[110]

(4) *Duty to purchase insurance.* The charter can create an additional layer of protection for directors by requiring the corporation to purchase liability insurance for the director.[111]

(5) *Exclusive forum provisions.* Delaware law allows corporations to specify the Delaware chancery court as the exclusive forum for all shareholder lawsuits brought under Delaware law.[112] Such an exclusive forum provision can be included either in the corporation's charter or in its bylaws.[113] However, the charter is more difficult to amend than

[113] *Id.*

the bylaws. In particular, unlike a bylaw amendment, a charter amendment requires a board resolution.[114]

2. Empirical Analysis

This section examines the frequencies with which the PBC charters and regular business corporation charters employ the various types of anti-litigation provisions. A composite variable named *Anti*-Litigation *Index* is used to capture the overall level of protection that the corporation affords its directors against litigation: the variable *Anti-Litigation Index* takes on values between zero and five, depending on how many of the five types of anti-litigation provisions a charter includes.

The results are displayed in Table 6 below. Instead of facilitating shareholder litigation and thereby strengthening their social purpose, PBCs rely even more heavily on anti-litigation provisions than regular corporations, though once again, the difference is not statistically significant. In sum, PBCs show no statistically significant propensity to strengthen litigation as an enforcement mechanism for their social commitment.

[114] *Id.* § 242(b).

Table 6: Charter Provisions Protecting Directors Against Litigations

	Public Benefit Corps.		Regular Business Corps.		Difference
	Obs.	Mean	Obs.	Mean

Notes: All variables are defined in Table A.2 in the Appendix. Welch's t-test is used to determine statistical significance. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

D. Insulating PBC Boards Against Shareholder Pressure

Even without a formal charter amendment, a PBC's shareholders can pressure the board to focus on shareholder wealth maximization, thereby causing the board to abandon its public benefit de facto, if not de jure.[115] To mitigate this problem, the charter can strengthen the board's independence vis-à-vis the corporation's shareholders.

1. The Different Types of Insulating Provisions

The various PBC charters and regular business corporation charters in the dataset include six types of charter provisions that can help insulate the board against shareholder pressure. The following explanation provides an overview; more technical definitions are provided in the Appendix.[116]

(1) *Classified boards*: By providing for a classified board, the charter can reduce the frequency with which directors are up for reelection,

[115] *Cf.* Davidoff Solomon & Fisch, *supra* note 16, at 74–76 (explaining that while PBCs are meant to balance profit maximization against their stated public benefit, the governance structure remains centered around the shareholders).
[116] *See* Appendix Table A.2 (defining the various governance variables).

thereby preventing shareholders from removing directors without cause.[117]

(2) *Number of directors*: Even if a corporation has a classified board, shareholders can gain control of the board by adding additional directors ("packing the board").[118] To prevent this practice, the charter can fix the number of directors or entrust the board with determining the number of directors.

(3) *Supermajority requirements for removal of directors*: In the absence of a classified board, shareholders can remove directors without cause.[119] Even if the board is classified, removal is still possible, albeit only with cause.[120] Either way, charters sometimes impose a supermajority requirement for a shareholder resolution removing one or more corporate directors.

(4) *Authorizing the board* to *adopt bylaws*: By default, the bylaws of a Delaware corporation can only be adopted or amended by the shareholders.[121] In practice, however, public corporation charters typically authorize the board to adopt or amend the bylaws.[122]

(5) *Supermajority requirements for shareholder bylaws*: Even if a corporation's charter authorizes the board to adopt bylaws, shareholders retain concurrent power to adopt or amend the bylaws.[123] To further shift the balance of power to the board, charters sometimes require shareholders to satisfy a supermajority requirement when amending the bylaws.

---

[117] *See* DEL. CODE ANN. TIT. 8, § 141(d) (West) (allowing the board to be divided into up to three classes, with only one class being up for reelection each year); *id.* § 141(k) (providing that in case of a classified board, directors can only be removed for cause).

[118] *See, e.g.*, John C. Coates IV, *Explaining Variation in Takeover Defenses: Blame the Lawyers*, 89 CAL. L. REV. 1301, 1399–400 (2001) (pointing out that shareholders can gain control of the board by creating additional board seats and filling the newly vacant seats with candidates of their choosing); Guhan Subramanian, *Bargaining in the Shadow of Takeover Defenses*, 113 YALE L.J. 621, 686 n.29 (2003) (noting that shareholders' ability to determine the number of directors allows them to pack the board).

[119] DEL. CODE ANN. TIT. 8, §141(k) (West). An exception applies if the directors were elected via cumulative voting. *Id.*

[120] *Id.*

[121] *Id.* § 109(a) (West). An exception applies if the corporation has not yet received payment for its stock. In that case, the "original or other bylaws … may be adopted, amended or repealed by the incorporators, by the initial directors of a corporation…, or, … by its board of directors." *Id.*

[122] *E.g.*, Michael Klausner, *Fact and Fiction in Corporate Law and Governance*, 65 STAN. L. REV. 1325, 1370 (2013) (noting that charters "typically" "authorize the board to amend [the company's] bylaws").

[123] DEL. CODE ANN. TIT. 8, § 109(a) (West).

(6) *Banning action by written consent.* By default, any action that shareholders can take at the annual meeting can also be taken via written consent.[124] Some charters, however, explicitly bar shareholder action by written consent either in whole or in part, thereby limiting shareholder action to annual or special meetings.

2. Empirical Results

This section examines the frequencies with which PBC charters and regular business corporation charters employ various charter provisions insulating the board against shareholder pressure. The composite variable *Insulation Index* captures the total level of protection that the charter affords the board. For purposes of calculating the Insulation Index, each type of insulating provision is worth one point. So, depending on how many of the six insulating provisions a charter includes, the variable *Insulation Index* ranges between zero and six.

The results for both the six individual variables and the composite variable are displayed in Table 7. PBC charters do, indeed, contain a number of provisions that protect the board against shareholder pressure. For example, all PBC charters authorize the board to adopt bylaws. However, I find no statistically significant evidence that PBC charters make heavier use of insulating charter provisions than regular business corporation charters. Moreover, even discounting the question of statistical significance, the mean value of the *Insulation Index* variable is virtually the same for regular business corporations (4.96) as for PBCs (5.06). In other words, there is no evidence that PBCs make strategic use of insulating charter provisions to strengthen their commitment to their stated public benefit.

[124] *Id.* § 228(a).

Table 7: Charter Provisions Insulating the Board Against Shareholder Pressure

	Public Benefit Corps		Regular Business Corps.		Difference
	Obs.	Mean	Obs.	Mean	
Components					
Classified board	17	0.76	340	0.77	0.00
Board size	17	0.88	340	0.86	-0.02
Supermajority for director removal	17	0.82	340	0.82	-0.01
Board can adopt bylaws	17	1.00	340	0.99	0.01*
Supermajority for shareholder bylaws	17	0.71	340	0.66	-0.04
Ban on action by written consent	17	0.88	340	0.86	-0.02
Insulation Index	17	5.06	340	4.96	-0.09

Notes: All variables are defined in Table A.2 in the Appendix. Welch's t-test is used to determine statistical significance. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

E. Summary

The picture emerging from my analysis of corporate charters is mixed. On the one hand, PBCs do not make use of charter provisions to facilitate shareholder litigation. Moreover, while some PBC charters contain provisions that strengthen the board's independence vis-à-vis the shareholders, PBC charters are essentially indistinguishable from regular business corporations on this dimension. On the other hand, a majority (68%) of PBCs subject changes to their PBC status to supermajority voting requirements or rely on a dual-class share structure.

VI. Alternative Signals

Charter provisions are not the only way for PBCs to signal that they are serious about protecting their stated public benefit(s). Other mechanisms may serve the same purpose. Against this background, this Part focuses on three non-

legal instruments that PBCs can employ to demonstrate that they take their social mission seriously. These instruments include the selection of corporate directors, ESG ratings, and certification by B Lab, a non-profit corporation.

A caveat is an order at this point. Both ESG ratings and B Lab certification are solely based on information available at the time the corporation is rated or certified. It follows that these mechanisms do not directly commit the corporation for the future. Still, it is conceivable that corporations use B Lab certification or high ESG ratings as an indirect commitment device. One can distinguish three different narratives in this context.

First, obtaining B Lab certification or high ESG scores and then losing them may brand a corporation as unreliable and opportunistic. This narrative is about the fact that third parties, such as consumers, investors, and employees, value consistency and predictability.

Second, in an environment where third parties such as consumers and employees are flooded with information, gaining and then losing B Lab certification may be salient enough to attract attention, even if the corporation does not change its business or governance practices This narrative is about the importance of salience to third parties with a limited capacity to process information.

Third, maintaining B Lab certification or high ESG scores may be cheaper than obtaining them for the first time. The reason is that an already certified corporation is already familiar with the pertinent steps and has already made some of the necessary adjustments in the past. Similarly, once a corporation has figured out how to maximize its ESG score and made any necessary adjustments to its business practices and governance, maintaining its ESG score will typically be easier. This third narrative relies on a difference in costs of achieving versus maintaining B Lab certification or high ESG scores.

All three narratives have in common that they provide explanations for why obtaining B Lab certification or high ESG scores may create an incentive for the corporation to maintain the relevant certification of ESG scores in the future. Thus, they show that corporations may use B Lab certification and ESG scores as de-facto commitment devices.

The effectiveness of the three commitment mechanisms discussed in this Part is very much a matter of conjecture. However, given the recent arrival of publicly traded PBCs, it is simply too early to know which of the various commitment strategies employed by PBCs will prove effective in maintaining PBCs' commitment to their stated public benefits. Against that background, the fact that board composition, ESG scores, and B Lab certification *may* have the potential to serve as commitment devices justifies an empirical exploration into the frequency with which PBCs rely on these mechanisms.

A. PBC Directors

At least in theory, PBCs may signal that they are serious about a particular social cause by choosing directors who are known to be devoted to that cause. There is no simple way of quantifying directors' reputations. Still, if PBC directors were systematically different from directors of general business corporations, one might expect that difference to be reflected in directors' demographic characteristics.

I therefore use demographic data from BoardEx to compare the directors of PBCs to those of the general business corporations in the sample.[125] The results are shown in Table 8. By and large, PBC directors are remarkably similar to directors of other corporations. PBCs have, on average, a slightly higher percentage of female directors, but this difference is not statistically significant at the conventional 5% level.

[125] BoardEx is available via Wharton Research Data Services [WRDS]. UNIV. OF PA., WHARTON RSCH. DATA SERVS. [WRDS], https://wrds-www.wharton.upenn.edu/.

Table 8: Board Characteristics

	Public Benefit Corp.		Business Corporations		Difference
	Obs.	Mean	Obs.	Mean	
Board Size	17	9.76	332	9.27	-0.49
Mean age	17	60.22	331	59.73	-0.48
Mean network size	17	2336.80	332	2046.66	-290.14
	17	0.29	332	0.26	-0.03
Diversity					
% female	17	0.91	297	0.85	-0.06*
% foreign	17	0.12	332	0.17	0.04
Education					
% with MBA	17	0.03	332	0.02	-0.01
% with PhD	17	0.07	332	0.03	-0.04

Notes: The variables mean director age, mean director network size, percentage of female directors, percentage of U.S. directors, percentage of directors with MBA, and percentage of directors with PhD are calculated separately for each corporate board. Network size is a variable provided by Boardex, which refers to the "number of overlaps through employment, other activities, and education." Welch's t-test is used to determine statistical significance. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

B. ESG Ratings

ESG ratings are controversial.[126] Many scholars believe that such ratings are easy to manipulate or that they do not capture anything particularly meaningful.[127] Still, despite this criticism, investors continue to use ESG

[126] *See, e.g.*, Alexander Coley, *ESG Ratings: A Blind Spot for U.S. Securities Regulation*, 43 NW. J. INTL. L. & BUS. 1, 22 (2022) (noting that "ESG ratings are the product of unregulated third-parties whose methodologies are criticized as opaque, inconsistent, and unreliable"); Andrew W. Winden, *Jumpstarting Sustainability Disclosures*, 76 BUS. LAW. 1215, 1228 (2021) (noting that "[t]he subjectivity of ESG ratings and some ESG metrics makes them . . . controversial"). *See also* Florian Berg et al., *Aggregate Confusion: The Divergence of ESG Ratings*, 26 REV. FINANCE 1315–1344 (2022) (discussing the divergence of different ESG ratings and investigating the causes of that divergence); Aneesh Raghunandan & Shiva Rajgopal, *Do ESG Funds Make Stakeholder-Friendly Investments?*, 27 REV. ACCOUNTING STUD. 822, 822–63 (2022) (providing that ESG scores are not correlated with firms' carbon emissions levels or compliance records).
[127] *See, e.g.*, Ebbe Rogge & Lara Ohnesorge, *The Role of ESG Rating Agencies and Market Efficiency in Europe's Climate Policy*, 28 HASTINGS ENVT'L L.J. 113, 138 (2022) (noting that ESG ratings disadvantage firms that lack the resources to disclose pertinent information).

ratings.[128] It is therefore necessary to consider the possibility that PBCs rely on ESG ratings as a commitment device.

To explore this possibility, I examine whether PBCs outperform other corporations in terms of ESG ratings. Specifically, I use Refinitiv's ESG ratings.[129] Refinitiv's ESG ratings are more highly regarded than many other ratings[130] and are widely used in financial literature.[131] The results are displayed in Table 9.

[128] *See, e.g.*, Rochelle Toplensky, *Why ESG Ratings Are All Over the Map: Requiring All Companies to Disclose a Uniform Set of ESG Data Would Make It Easier for Investors to Compare Funds and Companies*, WALL ST. J. Online, Aug. 17, 2023, https://plus.lexis.com/api/permalink/de9e7623-78fb-4de4-97c5-8ec5303d6532/?context=1530671 (noting that "[m]any investors look to ESG scores as an easy way to compare firms based on their environmental, social and governance practices").

[129] This dataset is available via Wharton Research Data Services [WRDS]. UNIV. OF PA., WHARTON RSCH. DATA SERVS. [WRDS], https://wrds-www.wharton.upenn.edu/ [https://perma.cc/7Y8A-N9GS].

[130] *See, e.g.*, Seth C. Oranburg, *The Unintended Consequences of Mandatory ESG Disclosures*, 77 BUS. LAW. 697, 709 (2022) (arguing that "[t]he Bloomberg ESG Score is essentially a word count of ESG-related terms in public disclosures" whereas the "Asset4 ESG Score," the former name of Refinitiv's ESG score, "attempts to measure ESG activity, as opposed to mere verbiage").

[131] *See, e.g.*, Elizabeth Dehmers et al., *ESG Did Not Immunize Stocks During the COVID-19 Crisis, But Investments in Intangible Assets Did*, 48 J. BUS. FIN. & ACCT. 433, 434 (2021) (using Refinitiv's ESG ratings to analyze the relationship between ESG ratings and stock prices); Elisa Menicucci & Guido Paolucci, *ESG Dimensions and Bank Performance: An Empirical Investigation in Italy*, 23 CORP. GOV. 563 (2023) (using Refinitiv's ESG ratings to analyze the relationship between ESG scores and bank performance). *See also* Szliárd Erhart, *Take It with a Pinch of Salt—ESG Rating of Stocks and Stock Indices*, 2022 INT. REV. FIN. ANALYSIS. 83, 83 (2022) (noting that Refinitiv's ESG scores "have been becoming an integral part of financial, business and consumption decisions"); Özge Sahin et al., *Environmental, Social, Governance Scores and the Missing Pillar—Why Does Missing Information Matter?*, 29 CORP. SOC. RESP. & ENV'L MGMT. 1782 (2022) (noting that "many scholars and investors" use Refinitiv's ESG scores).

Table 9: ESG Scores

	Public Benefit Corporations		Business Corporations		
	Obs.	Mean	Obs.	Mean	Difference
Combined ESG score	9	0.30	145	0.34	0.04
Environment score	9	0.17	145	0.17	0.00
Resource use	9	0.16	145	0.21	0.05
Emissions	9	0.21	145	0.18	-0.03
Innovation	9	0.08	145	0.09	0.01
Social score	9	0.38	145	0.41	0.03
Workforce	9	0.38	145	0.39	0.01
Human rights	9	0.11	145	0.20	0.09
Community	9	0.54	145	0.57	0.03
Product resp.	9	0.38	145	0.38	0.00
Governance score	9	0.32	145	0.39	0.08
Management	9	0.34	145	0.42	0.08
Shareholders	9	0.30	145	0.46	0.16
Strategy	9	0.22	145	0.19	-0.03
ESG controversies	9	0.80	145	0.94	0.14

Notes: Scores are based on Refinitiv's ESG Scores. For each PBC and the matched general business corporations, the ESG scores refer to the year in which the PBC was first publicly traded as a PBC. Welch's t-test is used to determine statistical significance. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

It is worth noting, first, that ESG scores were unavailable for a large percentage of firms. In particular, Refinitiv only contained ESG scores for 9 out of the 17 matched PBCs in the sample. It follows that the results in Table 9 should be interpreted with caution. Still, they provide no support for the hypothesis that PBCs rely on ESG ratings to signal their social values. The mean value of the variable *Combined ESG Score*, which aggregates the different category ratings, is actually higher for regular corporations than for PBCs, though that difference is not statistically significant. On the majority of category scores, regular corporations also outperform PBCs, though again, none of the differences are statistically significant.

C. Certification by B Lab

B Lab is a non-profit corporation that is very much at the heart of the public benefit corporation movement.[132] Founded in 2006, B Lab has long pursued the goal of shifting corporations' activities from a shareholder-centric to a stakeholder-oriented approach. To this end, B Lab has pursued two main paths.

First, B Lab has been a key player in lobbying states to adopt public benefit corporation legislation.[133] This effort to promote PBC legislation has been largely successful. Most U.S. states have adopted some such legislation,[134] and in many cases, the relevant legislation closely follows the Model Benefit Corporation Act (MBCA) championed by B Lab.[135]

Second, since it was formed in 2006, B Lab has offered a certification process, allowing corporations to be certified as so-called "B Corporations" or, for short, "B Corps" if they meet certain criteria related to B Lab's values.[136] In B Lab's own words, the certification process seeks to measure a corporation's "entire social and environmental impact."[137] Recertification is due every three years.[138] To qualify as a B Corporation, a company must "[d]emonstrate high social and environmental performance" by obtaining a score of 80 or more on B Lab's "impact assessment" and passing B Lab's risk review.[139] Moreover, in states that have adopted public benefit corporation legislation, such as Delaware, the corporation must be organized as a public benefit corporation.[140] And third, the corporation must "exhibit transparency" by making the result of their assessment "publicly available . . . on B Lab's website."[141] Certification as a B Corporation is widely thought to yield substantial marketing benefits.[142]

[141] *Id.*
[142] *See, e.g.*, Michael B. Dorff, *Assessing the Assessment: B Lab's Effort to Measure Companies' Benevolence*, 40 SEATTLE U.L. REV. 515, 518 (2017) (calling B Lab certification "incredibly important and influential in the benefit corporation community"); Christopher Marquis, *The*

I used B Lab's website to determine the extent to which publicly traded PBCs in the sample rely on certification by B Lab; said website allows interested users to look up the certification status of individual corporations.[143] Unfortunately, B Lab's website does not provide information on firms that were previously certified as B Corporations but have lost that status since. Therefore, this paper only includes information on those PBCs that were publicly traded as of December 31, 2023, seventeen in total. Of those seventeen PBCs, nine were certified as B Corporations as of December 31, 2023, and of the remaining eight PBCs, three conduct operations through subsidiaries that were certified B Corporations. In sum, twelve out of seventeen PBCs, or approximately 71%, relied, directly or indirectly, on B Lab's seal of approval.[144]

Two caveats are in order at this point. First, scholars disagree on how meaningful B Lab's vetting process really is.[145] Second and more importantly, B Lab's certification has an important limitation: it only attests to a company's environmental and social impact at the time the company is certified. Accordingly, it cannot guarantee a corporation's future adherence to social or environmental values. A certified B Corporation can abandon B Lab's values at a moment's notice, even if it previously used that certification to draw in investors, customers, or employees.

Etsy Inc. ("Etsy"), a company known for operating an e-commerce marketplace for handmade and vintage goods,[146] illustrates this problem. In 2015, Etsy went public as a certified B Corporation.[147] After going public, Etsy began to face pressure from investors concerned about slowing growth and high

B Corp Movement Goes Big, 18 STANFORD SOCIAL INNOVATION REVIEW 22, 26 (2020) (asserting that certification as a B Corp allowed Laureate, a corporation operating educational institutions, "to credibly demonstrate that it was focused on student needs" and thereby set itself apart from numerous for-profit education corporations with poor reputations); Joseph Pileri, *Democratizing the Fourth Sector: B Corps and Beneficiary Participation*, 72 S.C. L. REV. 83, 85 (2020) (noting that "B Corp status is widely recognized and highly valued" and emphasizing that corporations use B Lab certification to "signal their commitment" to social or environmental sustainability).

[143] *See* B Lab, Find a B Corp, https://www.bcorporation.net/en-us/find-a-b-corp/.

[144] *Infra* Table 1.

[145] *Contrast* Dorff, *supra* note 20, at 553 (analyzing B Lab's impact assessment process and concluding that it "is a deeply considered and eminently reasonable third-party assessment tool for benefit corporations") with David Groshoff, *Contrepreneurship? Examining Social Enterprise Legislation's Feel-Good Governance Giveaways*, 16 U. PA. J. BUS. L. 233, 269 (2013) (noting that "[w]hile B Lab offers what it contends is an independent certification, in reality, companies are simply paying to license B Lab's mark of certification.").

[146] *See* Etsy Inc., Keep Commerce Human, https://www.etsy.com/about [https://perma.cc/RTA8-2T4E] (last visited on Jan. 28, 2024).

[147] *See* Etsy Inc., Form S-1/A, filed with the SEC (April 14, 2015), *available at* https://www.sec.gov/Archives/edgar/data/1370637/000119312515129455/d806992ds1a.htm [https://perma.cc/54T2-YLUG] ("We are a Certified B Corporation.").

expenses.[148] Only two years later, in 2017, Etsy fired Chad Dickerson, its CEO of six years, eliminated the business team that it had charged with monitoring the corporation's environmental and social endeavors, and allowed its B Corporation status to lapse.[149] When the news of Etsy's change of direction broke, employees were in tears, but to no avail.[150] Etsy's story demonstrates the limits of B Lab certification as a commitment device: given the adverse reputational effect, corporations may be reluctant to let their status as B corporations lapse, but that is no guarantee that they won't resort to this option.

Aggregating the various mechanisms, 15 out of 19 publicly traded PBCs, or approximately 79%, protect their PBC status by way of supermajority voting requirements, dual-class shares, or B Lab certification.[151]

Table 10: Different Levels of Commitment

Publicly traded PBCs that use the following commitment mechanisms	No.	%
Supermajority requirement for charter amendments	5	26%
Supermajority requirement for charter amendments or dual-class shares	13	68%
Supermajority requirement for charter amendments, dual-class shares, or B-lab certification	15	79%
None of the above	4	21%

Note: All governance variables are defined in Table A.2 in the Appendix. The data in this table are based on a sample consisting of all nineteen non-SPAC PBCs.

[151] *Infra* Table 10.

VII. The Role of Law Firms

Several possible explanations exist for the observed heterogeneity in commitment levels. First, it is conceivable that no single level of commitment is uniformly optimal for all PBCs. Instead, different levels of commitment may be optimal for different companies. Second, given that publicly traded PBCs are a relatively recent phenomenon, PBCs and their lawyers may choose a suboptimal level of commitment due to a lack of experience. These explanations are not mutually exclusive; both can simultaneously be true to some extent.

Table 11: PBC IPOs and Law Firms

PBC		Underwriters		PBC or Underwriters	
Law Firm	No.	Law Firm	No	Law Firm	No.
Latham	3	Latham	3	Latham	6
Cooley	2	Davis Polk	1	Cooley	2
Gibson Dunn	1	Goodwin Procter	1	DLA Piper	1
DLA Piper	1	Simpson Thacher	1	Foley Hoag	1
Foley Hoag	1	Skadden	1	Freshfields	1
Freshfields	1	Weil Gotshal	1	Gibson Dunn	1
Pillsbury	1	White & Case	1	Pillsbury	1
Ropes & Gray	1	Wilson Sonsini	1	Ropes & Gray	1
				White & Case	1
				Wilson Sonsini	1
				Davis Polk	1
				Goodwin Procter	1
				Simpson Thacher	1
				Skadden	1
				Weil Gotshal	1

Notes: Law firm names are abbreviated for brevity. Note that one PBC failed to disclose its underwriters' law firm, which explains why the total number of law firms listed as advising PBCs is greater by one than the total number of law firms listed as advising underwriters.

There is no simple way to test the first of these explanations. However, the role of lawyers' experience can be explored empirically. To this end, I focus on the law firms that advise PBCs with respect to their going public transactions. IPO firms disclose both their legal advisors and the underwriters' legal advisors in their filings. Moreover, many of the corporations that went public by

merging with a SPAC or by way of a direct listing also disclosed their legal advisors in their filings. Table 11 focuses solely on firms that went public by way of a traditional IPO. Only two law firms, Latham & Watkins and Cooley, provided advice on more than one PBC IPO. Of those two firms, Cooley advised two PBCs and Latham three. For Latham & Watkins, the number goes up to six if one includes PBC IPOs where Latham & Watkins advised the underwriter(s).

If one takes into account cases where PBCs went public by way of a direct listing or by merging with a SPAC, these numbers change slightly, as shown in Table 12. Cooley and Latham & Watkins are still the only law firms having advised more than one PBC, but Cooley has advised a total of three PBCs and Latham four. If one adds law firms' experience in advising underwriters, Latham's number rises to a total of seven transactions. Still, the fact remains that a large majority of PBCs (and their underwriters) received advice from law firms that had no prior experience with PBCs going public.

The hypothesis that law firms advising publicly traded PBCs may not have had the opportunity to gain much experience has further support if one considers individual attorneys rather than law firms. Whereas Latham & Watkins played a role in seven going-public transactions, the two most commonly involved attorneys, Marc Jaffe and Stelios Saffos, were each involved in only three of those transactions. While this is an impressive record given the overall small number of publicly traded PBCs, it simply does not compare to the level of experience that attorneys often have with regular business corporations' IPOs.

Do PBCs advised by experienced law firms use more rigorous charter provisions? To explore this question, I define a variable *legal commitment* that takes on the value one if the charter protects the PBC statute by way of a supermajority voting requirement, if the charter provides for a dual-class share structure, or if the charter meets both these criteria. Otherwise, this variable is equal to zero. Furthermore, I create the variable *law firm experience*, which is designed to capture the level of experience that the law firm advising the PBC in its going public transaction had at the time the PBC went public. Specifically, the variable *law firm experience* is equal to the number of prior deals in which the firm advised either a PBC or its underwriter in a going public transaction. For example, if a law firm advised one PBC on its IPO in 2020 and a second PBC on its direct listing in 2021, then at the time of the first transaction, the variable experience takes on the value zero, whereas at the time of the second transaction, it takes on the value one. I then regress the variable *legal commitment* on the variable *law firm experience* and various covariates.

Table 12: PBCs and Law Firms

PBC		Underwriters		PBC or Underwriters	
Law Firm	No.	Law Firm	No	Law Firm	No.
Latham	4	Latham	3	Latham	7
Cooley	3	Davis Polk	1	Cooley	3
Covington	1	Procter	1	Covington	1
DLA Piper	1	Simpson	1	DLA Piper	1
Foley Hoag	1	Skadden	1	Davis Polk	1
Freshfields	1	Weil Gotshal	1	Foley Hoag	1
Gibson Dunn	1	White & Case	1	Freshfields	1
Kirkland & Ellis	1	Wilson Sonsini	1	Gibson Dunn	1
Maslon	1			Goodwin Procter	1
Pillsbury	1			Kirkland & Ellis	1
Ropes & Gray	1			Maslon	1
Sidley Austin	1			Pillsbury	1
				Ropes & Gray	1
				Sidley Austin	1
				Simpson Thacher	1
				Skadden	1
				Weil Gotshal	1
				White & Case	1
				Wilson Sonsini	1

Notes: Law firm names are abbreviated for brevity. Columns 1 & 3 include not just IPOs but also cases in which the PBC went public by merging with a SPAC or via a direct listing. Cases in which an already publicly traded corporation converted into a PBC are not captured in columns 1 or 3 since the relevant filings do not disclose the law firms involved.

The results are displayed in Table 13. The relationship between variables *law firm experience* and *legal commitment* is both positive and statistically significant at the 5% level. This finding is consistent with the idea that PBC charters are still evolving and that the lack of legal commitment devices in some charters may partially be the result of inexperienced legal advisors.

Table 13: The Role of Law Firm Experience in Predicting Legal Commitment

	Dependent variable: legal commitment: does the charter require a supermajority shareholder vote to eliminate the PBC status, and/or does the charter provide for dual-class shares?			
	(1)	(2)	(3)	(4)
	b/se	b/se	b/se	b/se
Firm experience	0.094**	0.092**	0.101**	0.093**
	(0.035)	(0.035)	(0.038)	(0.035)
Calendar year		0.048		
		(0.130)		
IPO			-0.289	
			(0.218)	
B Lab certification				0.094
				(0.243)
Observations	19	19	19	19
R sq.	0.127	0.141	0.212	0.135
Adjusted R sq.	0.076	0.033	0.114	0.027

Note: Linear probability model. The variables legal commitment, law firm experience, and calendar year are defined in Table A.2 in the Appendix. All regressions use robust standard errors. ***, **, and * indicate statistical significance at the 1%, 5%, and 10% levels respectively.

One potential concern regarding the results in Table 13 is that the results therein may be driven by a "Cooley/V&E" effect: perhaps the law firms Cooley and Vison & Elkins are generally more likely to advise PBCs to adopt dual class shares and supermajority requirements. In other words, maybe it's the law firm that counts but not necessarily the law firm's experience with PBCs.[152] To address this concern, I run a separate set of regressions as a robustness check in which I include the dummy variables that capture whether the PBC or the underwriters were advised by Vinson & Elkins, Cooley, or by either of these two firms. The results are displayed in Table A.3 in the Appendix. Crucially, in these additional regressions, the size of the experience coefficient becomes even larger, and in two of the three additional regressions, the statistical significance increases as well. In other words, it is indeed lawyer experience that drives the results in Table 13.

[152] I am indebted to Elizabeth Pollman for raising this possibility during a presentation at the 2024 National Business Law Scholars Conference.

VIII. The Need for Tradeoffs

A key result of the empirical analysis presented in this Article is that PBCs differ substantially in the extent to which they use different legal commitment devices. Against this background, it is important to note that a greater commitment is not necessarily better. Choosing the appropriate level of commitment is a complex task. Several factors contribute to this complexity.

A. The Costs of Commitment

The various legal commitment devices that PBCs use are not costless. Some of the relevant costs are a necessary consequence of the very commitment sought. Once effectively committed to a particular public benefit, a PBC may find that such commitment makes it difficult or impossible to find enough investors to continue its operations. Even if a PBC's social goals enjoy great support from investors at the time the PBC goes public, that enthusiasm may fade over time. Public goals that are currently in vogue may lose their appeal as competing social causes take the spotlight. One generation of customers may prioritize saving specific endangered species from extinction, whereas the next may focus more on reducing carbon emissions or protecting human rights. Accordingly, customers who were willing to pay a premium for the company's products may switch to competing products as priorities and attention shift. Such changes are entirely understandable, yet they may prove fatal for a company that has chained itself to a now unfashionable social or environmental cause.

Even setting aside the fact that the intended commitment itself may prove disproportionately costly, most of the legal commitment devices discussed in this Article can have unsavory side effects. Charter provisions that facilitate or fail to curtail shareholder litigation may help enforce the PBC's public commitment, but they may also result in frivolous litigation.[153] Plaintiffs'

[153] According to some scholars, shareholder litigation levels are already excessive. *See, e.g.*, Dan Awrey et. al., *Resolving the Crisis in U.S. Merger Regulation: A Transatlantic Alternative to the Perpetual Litigation Machine*, 35 YALE J. ON REG. 1, 12 (2018) (arguing that excessive levels of shareholder litigation amount to a shareholder litigation crisis"); Stephen M. Bainbridge, *Fee-Shifting: Delaware's Self-Inflicted Wound*, 40 DEL. J. CORP. L. 851, 852 (2016) (arguing that shareholder litigation levels had "reached crisis proportions."); Jessica Erickson, *Investing in Corporate Procedure*, 99 B.U. L. REV. 1367, 1373 (2019) (noting the "current crisis in shareholder litigation"); Sean J. Griffith, *Correcting Corporate Benefit: How to Fix Shareholder Litigation by Shifting the Doctrine on Fees*, 56 B.C. L. REV. 1, 1 (2015) (diagnosing "a larger crisis in shareholder litigation."). Other voices take a more sanguine view of shareholder litigation. *See, e.g.*, Robert B. Thompson & Randall S. Thomas, *The New Look of Shareholder Litigation: Acquisition-Oriented Class Actions*, 57 VAND. L. REV. 133, 140 (2004) (arguing that in light of the benefits that shareholder litigation yields in reducing managerial agency costs, the costs of "acquisition-oriented class actions . . . do not appear excessive"). *See also* Jens Dammann, *Fee-Shifting Bylaws: An Empirical Analysis*, 65 J.L. & ECONS. 1, 3 (2022) (finding that Delaware's temporary

lawyers may exploit such provisions to reap juicy legal fees, regardless of whether the relevant litigation ultimately benefits the company. Charter provisions that insulate the board from shareholder pressure can help the board implement the corporation's social goals. However, they also increase the agency costs associated with board independence.[154] Rather than using their leeway to promote the PBC's stated benefit, directors may use their increased insulation to engage in shirking, empire-building, self-entrenchment, or other activities that benefit the directors at the shareholders' expense. Dual-class shares that allow founders to keep voting control while parting with most of the equity are similarly problematic. Some scholars have theorized that dual-class shares may benefit the other shareholders by ensuring that the founder(s)' idiosyncratic vision for the corporation prevails.[155] But dual-class shares can also become an instrument for the founders to enrich themselves at the other shareholders' expense or to cling to power long after the founders have ceased to benefit the corporation.[156]

Supermajority requirements may be the least objectional commitment device in terms of unintended side effects. Still, even supermajority requirements have a potential for abuse since they may create a so-called hold-up problem:[157] if it ever becomes necessary to abandon the company's PBC status, some shareholders may seek to extract private benefits in exchange for giving their assent. In sum, legal commitments come at a price.

---

legalization of fee-shifting bylaws, which had the potential to reduce shareholder litigation substantially, caused stock prices to fall not rise).

[154] This downside of charter provisions increasing board independence is well known. Against this background, it is highly controversial, for example, how classified boards impact shareholder wealth. Some scholars have found that charter provisions that classify corporate boards reduce shareholder wealth. *See, e.g.*, Lucian A. Bebchuk & Alma Cohen, *The Costs of Entrenched Boards*, 78 J. FIN. ECON. 409, 430 (2005) (finding that staggered board are associated with reduced firm value). Other scholars come to different conclusions. *See* K.J. Martijn Cremers & Simone M. Sepe, *The Shareholder Value of Empowered Boards*, 68 STAN. L. REV. 67, 71 (2016) (analyzing both staggering and de-staggering decisions and finding that staggered board are associated with an increase in firm value).

[155] *See* Zohar Goshen & Assaf Hamdani, *Corporate Control and Idiosyncratic Vision*, 125 YALE L.J. 560, 566 (2016) (arguing that dual-class shares provide reassurance to investors that the firm will be managed in accordance with the founder's idiosyncratic vision).

[156] *See, e.g.*, Lucian A. Bebchuk & Kobi Kastiel, *The Untenable Case for Perpetual Dual-Class Stock*, 103 VA. L. REV. 585, 630 (2017) (arguing that "potential benefits of dual-class structures can be expected to decline and the potential costs to increase" and that "controllers have perverse incentives to retain dual-class structures even when those structures become substantially inefficient"); Lucian A. Bebchuk & Kobi Kastiel, *The Perils of Small-Minority Controllers*, 107 GEO. L.J. 1453, 1457 (2019) (arguing that "dual-class structures that enable controllers to have a lock on control . . . with only a small fraction of the company's equity capital. . . can be expected to generate considerable governance risks and costs").

[157] This is a general feature of supermajority requirements. *See, e.g.*, Lucian Arye Bebchuk, *Federalism and the Corporation: The Desirable Limits on State Competition in Corporate Law*, 105 HARV. L. REV. 1435, 1510 (1992) (noting that "a demanding supermajority requirement may . . . give [some shareholders] an undesirable hold-up power").

B. Defining the Optimum

To make matters more complicated, it is not clear what PBCs are or should be maximizing. Delaware law requires regular business corporations to adhere to the goal of shareholder wealth maximization. Shareholder wealth maximization offers a clear yardstick against which to evaluate charter provisions and other corporate governance arrangements. By contrast, PBCs explicitly pursue a more complex set of goals, making it more difficult to evaluate the usefulness of PBCs' charter provisions.

From a public policy perspective, lawmakers and courts may want to promote the level of commitment to PBCs' stated public benefits that maximizes social welfare. However, given the relatively recent arrival of publicly traded PBCs, it is difficult to predict the extent to which committing PBCs to their stated public benefits promotes social welfare. Without more information about how much society benefits from committing PBCs to their stated public benefits, pushing for a particular level of commitment is a dubious undertaking.

C. Firm-Specific Optima

Finally, as noted throughout this Article, there may not be a single uniform level of commitment that is optimal for all PBCs. For example, a higher level of commitment may be suitable for PBCs that pursue a broadly defined public benefit such as environmental protection, whereas a narrowly defined benefit may soon become obsolete, making a strict commitment to that benefit highly questionable. Similarly, some PBCs may not need to rely on any of the commitment strategies described in this Article because they are already contractually or economically committed to the public benefits they pursue. A particular PBC may have already made massive financial investments in the pursuit of its stated public benefits, investments that would become useless if the corporation were to change course. For example, a car manufacturing startup that has spent massive amounts of resources on developing electric vehicles is unlikely to switch to the production of traditional vehicles.

IX. Implications

The findings presented in this Article have important legal policy implications. Many scholars have suggested that the statutory rules on PBCs should be made more rigorous[158] By contrast, the findings presented in this

[158] *See, e.g.*, Ofer Eldar, *The Role of Social Enterprise and Hybrid Organizations,* 2017 COLUM. BUS. L. REV. 92, 190 (2017) (suggesting that benefit corporations be required to obtain certification); Ellen Berrey, *Social Enterprise Law in Action: Organizational Characteristics of U.S. Benefit Corporations*, 20 TRANSACTIONS: TENN. J. BUS. L. 21, 100 (2018) (arguing that "[s]tatutes should . . . . creat[e] a higher threshold to becoming a benefit corporation"); J. Haskell Murray,

Article show that such proposals are premature, at least when it comes to publicly traded PBCs. Four main reasons support this conclusion.

To begin with, the vast majority of publicly traded PBCs—fifteen out of nineteen, or approximately 79%,—use at least one of the main commitment devices examined in this Article, be it supermajority requirements protecting the company's PBC status, dual-class shares, or B Lab certification. This result alleviates voiced the literature's concern that PBCs chiefly serve greenwashing purposes.[159]

Second, the very heterogeneity in commitment levels we observe offers a valuable opportunity to learn which commitment mechanisms prove effective in the medium and long term and at what cost. For example, it will become clear whether founder-controller(s) protected by dual-class shares can be relied on to protect their PBCs' social vision or whether, in practice, they are just as quick to scuttle it as ordinary shareholders. Similarly, it remains to be seen whether supermajority requirements for charter amendments prove to offer effective protection or not. This opportunity for further analysis is particularly beneficial because of the complexities involved in setting an optimal commitment level. As noted in the previous part, a higher level of commitment is not without direct and indirect costs.

Third, this paper has provided evidence that the level of relevant legal experience on the part of lawyers correlates with a higher level of commitment. Publicly traded PBCs only date back to 2017, and their overall number remains small. Only nineteen non-SPAC PBCs have ever been publicly traded. Accordingly, even leading law firms have had little opportunity to acquire experience with publicly traded SPACs. The large majority of law firms advising PBCs going public have had no prior experience with such transactions. As PBCs become more common and lawyers gain more relevant experience, publicly traded PBCs may move towards a higher level of commitment, thereby obviating the need for regulatory intervention.

Fourth, in light of both theoretical considerations and the observed heterogeneity of PBC charters, it is quite possible that there may not be a one-size-fits-all solution that offers the perfect level of commitment for all PBCs. This is not necessarily an argument against all regulatory intervention. However, it militates against any one-size-fits-all solutions.

An Early Report on Benefit Reports, 118 W. VA. L. REV. 25, 47–48 (2015) (arguing that states should impose stricter reporting requirements); Joseph W. Yockey, *Does Social Enterprise Law Matter?,* 66 ALA. L. REV. 767, 821 (2015) (arguing that "states should also require an independent social audit rather than leave it to benefit corporations to provide their own assessments against a third-party standard").

[159] *See, e.g.*, Joseph W. Yockey, *Does Social Enterprise Law Matter?,* 66 ALA. L. REV. 767, 807 (2015) (noting that "one worry is that benefit corporations will use the form only as a vehicle for 'cheap talk' or greenwashing").

In light of the above, changes to Delaware's law on PBCs cannot be justified at this time. Moreover, the case for federal regulation of PBCs is even weaker. Federal legislation would foreclose regulatory experimentation.[160] Moreover, once in existence, federal law governing private enterprises is difficult to roll back.[161] And federal courts may not match Delaware's propensity for speedy conflict resolution.[162] In sum, both state and federal lawmakers should abstain from adding rigor to the law on public benefit corporations.

Conclusion

Public benefit corporations ("PBCs") constitute a new stage in the evolution of corporations.[163] Their directors have a legal duty to balance the goal of profit

---

[160] *See* New State Ice Co. v. Liebmann, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting) ("It is one of the happy incidents of the federal system that a single courageous state may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country."). *See also* ROBERTA ROMANO, THE GENIUS OF AMERICAN CORPORATE LAW 5 (1993) (noting that "federalism spurs innovation in public policy because of the incremental experimentation afforded by fifty laboratories of states competing for citizens and firms"); Roberta Romano, *The States As A Laboratory: Legal Innovation and State Competition for Corporate Charters*, 23 YALE J. ON REG. 209, 246 (2006) (examining the diffusion of corporate law rules across states and concluding that "[o]ne observes a typical pattern of initial experimental variation . . . followed by a majority of states eventually settling upon one format").

[161] *See also* Roberta Romano, *Empowering Investors: A Market Approach to Securities Regulation*, 107 YALE L.J. 2359, 2387 (1998) (noting that "[w]ith only a national law, . . . a legislative or judicial mistake would be more difficult to reverse, as Congress moves considerably more slowly than state legislatures").

[162] *Cf.* Brett H. McDonnell, *Two Cheers for Corporate Law Federalism*, 30 J. CORP. L. 99,106 (2004) (praising the Delaware Chancery Court for being able to "move quickly"); Leo E. Strine, Jr., *"Mediation-Only" Filings in the Delaware Court of Chancery: Can New Value Be Added by One of America's Business Courts?*, 53 DUKE L.J. 585, 588 (2003) (noting that Delaware's Chancery Court and Supreme Court "can act with the speed and expertise"); Jens Dammann, *The Mandatory Law Puzzle: Redefining American Exceptionalism in Corporate Law*, 65 HASTINGS L.J. 441, 483 (2014) (noting that "Delaware's Chancery Court . . . is widely thought to be unparalleled in terms of quality, experience, and speed"); David A. Skeel, Jr., *Icarus and American Corporate Regulation*, 61 BUS. LAW. 155, 167 (2005) (noting that "[a]s even Delaware's critics concede, the Delaware court system is remarkably efficient.").

[163] *See, e.g.*, Michael B. Dorff, *Why Public Benefit Corporations?*, 42 DEL. J. CORP. L. 77 (2017) (calling public benefit corporations "a revolutionary new form of business organization that overturn the fundamental corporate principle of shareholder wealth maximization"); Scott J. Shackelford et al., *Unpacking the Rise of Benefit Corporations: A Transatlantic Comparative Case Study*, 60 VA. J. INTL. L. 697, 701 (2020) (noting that "benefit corporation legislation [codified] . . . [a] fundamental shift in corporate perspective"); Ryan Z. Ullman, *Making Benefit Corporations More Beneficial: Drafting Statutes to Entice Entrepreneurs and Consumers Alike*, 14 J. BUS. & TECH. L. 1, 24 (2018) (praising public benefit corporations for making "fundamental changes to the conventional shareholder primacy model"); Laura A. Farley, Note *Knowledge Is Power: How Implementing Affirmative Disclosures Under the Jobs Act Could Promote and Protect Benefit Corporations and Their Investors*, 99 MINN. L. REV. 1507, 1516 (2015) (arguing that

maximization against the public benefits stated in their charter and the interests of those that are materially impacted by the corporation's activities.[164] At least in theory, this legal obligation allows them to send a credible signal of their commitment to the stated public benefit. In practice, though, the commitment value of PBC statutes is limited: PBCs can convert into regular business corporations by way of a simple charter amendment, and even without such an amendment, shareholders can pressure directors to focus on shareholder wealth maximization. Thus, the question is whether PBCs rely on private ordering to overcome the weaknesses of the statutory defaults.

Based on the hand-coded and hand-collected dataset of more than 300 corporate charters, including both PBC charters and matched business corporation charters, I have shown that the answer to this question is complex. The use of charter provisions aimed at strengthening PBCs' commitment to their stated public benefits varies substantially across PBCs. Still, a majority of PBC charters either require a supermajority to eliminate the PBC status or impose a dual-class share structure, two mechanisms that can substantially reinforce the relevant PBC's commitment to its stated public benefits. The picture changes further if one takes into account non-legal mechanisms. A substantial majority of PBCs rely on certification by B Lab, a non-profit corporation that measures companies' social and environmental impact. In aggregate, 79% of all PBCs make use of supermajority requirements, dual-class shares, or B-Lab certification.

My analysis has important policy implications. Given the weakness of the statutory defaults on PBCs, many scholars have called for reforms to make PBC statutes more rigorous. Yet my findings suggest that such calls are, at best, premature, for several reasons. First, the heterogeneity of PBC charters raises the possibility that different levels of commitment may be optimal for different PBCs. This possibility does not render all types of regulatory intervention inefficient, but it weakens the case for any mandatory one-size-fits-all solution. Second, the heterogeneity of PBC charters offers lawmakers a valuable opportunity to observe how different commitment devices fare in practice. It would be regrettable if lawmakers chose to waste this opportunity by rushing to impose mandatory commitment mechanisms. Third, my finding that lawyer experience correlates with greater commitment raises the possibility that as lawyers gain more experience with publicly traded PBCs, the average level of commitment will increase without regulatory intervention.

In time, the circumstances under which PBCs abandon their social or environmental commitment and the costs and benefits of the various mechanisms that PBCs use to strengthen that commitment will become clearer.

"different accountability requirements in benefit corporation legislation establish a fundamental difference from regular corporations").

[164] *E.g.*, COLO. REV. STAT. ANN. §§ 7-101-503 (1) (West 2022); DEL. CODE ANN. TIT. 8, §§ 362(a) (West 2022); KAN. STAT. ANN. § 17-72a02(a) (West 2022).

Until then, lawmakers should view existing publicly traded PBCs as a useful field test and let their development play out.

Appendix

Table A.1: Financial Variables

Variable	Definition	Compustat Codes
Assets	Total assets	at
Book leverage	Total debt over total assets	(dltt+dlc)/at
CapEx	Capital expenditures over total assets	capx/at
Dividends over assets	Dividends paid on common/ordinary capital/total assets	dvc/at
Employees	Employees	emp
Financial leverage	Total debt over sum of total debt and market capitalization.	(dlc+dltt)/((dlc+dltt+(prcc_f*csho))
Market cap.	Market capitalization	prcc_f * csho
Return on assets (ROA)	Operating income before depreciation over total assets	ebitda/at
Return on equity (ROE)	Operating income before depreciation over total common/ordinary equity	oibdp/ceq
Sales	Sales (net)	sale
Tangibility	Property, plant, and equipment/total assets	ppent/at
Tobin's q	(Total assets – common equity + market cap) over total assets	(at-ceq+(prcc_f*csho))/at
Total debt	Long term debt + dent in current liabilities	dltt+dlc

Table A.2: Non-Financial Variables

Variable	Definition
Age	This variable captures the number of years that a corporation has been publicly traded. In a particular year X, during which a company is publicly traded, its age is defined by X minus the first year for which data are available for that company in the CCM database.
Advancement of Expenses	This variable takes on the value one if the charter requires (and not merely authorizes) the corporation to advance the director's expenses in one or more of the situations covered by DGCL § 145. Otherwise, this variable takes on the value zero.
Anti-litigation Index	This variable is the sum of five other variables: (1) *liability waiver*, (2) *mandatory indemnification*, (3) *advancement of expenses*, (4) *duty to purchase insurance*, and (5) *exclusive forum*.
Board bylaw authority	This variable takes on the value one if the certificate of incorporation authorizes the board to adopt bylaws, zero otherwise.
Calendar year	The variable calendar year is equal to the calendar year in which a PBC was first publicly traded as a PBC.
Classified board	This variable takes on the value one if the certificate of incorporation contains a provision classifying the board into two or three classes, zero otherwise.
Dual-class shares	This variable takes on the value one if the charter provides for two or more classes of common stock, not all of which have an identical number of votes, zero otherwise.
Duty to purchase insurance	This variable takes on the value one if the charter requires the corporation to purchase insurance within the meaning of DGCL § 145 (g) for corporate directors, zero otherwise.
Exclusive forum	This variable takes on the value one if the charter designates an exclusive forum for some or all shareholder lawsuits, zero otherwise.
Fixed number of directors	This variable takes on the value one if the certificate of incorporation contains a provision specifying the exact or the maximum number of directors or if the charter contains a provision giving the board the exclusive power to specify the number of directors. Otherwise, this variable takes on the value zero.
Insulation-Index	This variable is the sum of six other variables: (1) *classified board*, (2) *fixed number of directors*, (3) *supermajority for director removal*, (4) *board bylaw authority*, (5) *supermajority for shareholder bylaws*, and (6) *no action by written consent.*

Law firm experience	This variable is equal to the number of prior deals in which the law firm has advised a PBC or its underwriters on a going-public transaction. Going-public transactions include IPOs, mergers of privately held PBCs with publicly traded SPACs, and direct listings.
Legal commitment	The variable legal commitment takes on the value one if a PBC charter requires a supermajority shareholder vote for eliminating the corporation's PBC status and/or if the charter provides for two or more classes of common stock, not all of which have an identical number of votes. Otherwise, this variable takes on the value zero.
Liability waiver	This variable takes on the value one if the charter eliminates or limits, in whole or in part, the liability of corporate directors for fiduciary duty violations, zero otherwise.
Mandatory Indemnification	This variable takes on the value one if the charter imposes a duty on the corporation to indemnify directors, in whole or in part, in at least some cases in which DGCL § 145 allows but does not require indemnification. Otherwise, this variable takes on the value zero.
No action by written consent.	This variable takes on the value one if the charter prevents shareholders, either generally or in specific cases, from acting by written consent even though action by written consent would be allowed under Delaware's default rules.
Supermajority for director removal	This variable takes on the value one if the certificate of incorporation imposes a supermajority requirement for removing corporate directors, zero otherwise. For the purpose of this definition, any provision requiring a higher number of votes than the one required by the default rules is a supermajority requirement.
Supermajority for shareholder bylaws	This variable takes on the value one if the certificate of incorporation requires more than a simple majority of the shares present or represented by proxy and entitled to vote on the matter for adopting shareholder bylaws, zero otherwise.

Table A.3: The Role of Law Firm Experience in Predicting Legal Commitment – A Robustness Check

	Dependent variable: legal commitment: does the charter require a supermajority shareholder vote to eliminate the PBC status, and/or does the charter provide for dual-class shares?			
	(1)	(2)	(3)	(4)
	b/se	b/se	b/se	b/se
